# Chapter 1

## Hierarchical Index

### 1.1 Class Hierarchy

This inheritance list is sorted roughly, but not completely, alphabetically:

ActionUtility . . . . .	19
ASMFilePathAttribute . . . . .	22
ASMMModel . . . . .	22
Profile . . . . .	82
Scene . . . . .	99
SceneCollection . . . . .	106
SceneCollectionTemplate . . . . .	111
ASMMModelExtensions . . . . .	23
ASMScriptableSingleton< T > . . . . .	28
ASMScriptableSingleton< ASMSettings > . . . . .	28
ASMSettings . . . . .	29
Assets . . . . .	31
AssetSearchUtility . . . . .	32
Async< T > . . . . .	33
Async< bool > . . . . .	33
BuildOption . . . . .	33
Callback . . . . .	34
CallbackUtility . . . . .	36
CanvasSortOrderUtility . . . . .	36
CoroutineUtility . . . . .	37
CrossSceneReference . . . . .	39
CrossSceneReferenceUtility . . . . .	39
DefaultScenes . . . . .	40
DependencyInjectionUtility . . . . .	43
DictionaryUtility . . . . .	44
CoroutineUtility.Events . . . . .	45
FallbackSceneUtility . . . . .	47
CallbackUtility.FluentInvokeAPI< T > . . . . .	47
GlobalCoroutine . . . . .	48
GuidReference . . . . .	49
GuidReferenceUtility . . . . .	50
Scene.IMethods.IEvent . . . . .	54
Scene . . . . .	99
ProfileDependentScene . . . . .	89

Scene.IMethods_Target.IEvent . . . . .	55
ASMSceneHelper . . . . .	25
SceneCollection.IMethods.IEvent . . . . .	56
SceneCollection . . . . .	106
ProfileDependentCollection . . . . .	86
SceneCollection.IMethods_Target.IEvent . . . . .	56
ASMSceneHelper . . . . .	25
IFadeLoadingScreen . . . . .	57
DependencyInjectionUtility.IInjectable . . . . .	57
IApp . . . . .	51
App . . . . .	20
IAssetsProvider . . . . .	51
AssetsProxy . . . . .	32
IProfileManager . . . . .	65
IProjectSettings . . . . .	66
ASMSettings . . . . .	29

SceneCollection . . . . .	106
Scene.IMethods . . . . .	58
Scene . . . . .	99
ProfileDependentScene . . . . .	89
SceneCollection.IMethods . . . . .	59
SceneCollection . . . . .	106
ProfileDependentCollection . . . . .	86
Scene.IMethods_Target . . . . .	61
ASMSceneHelper . . . . .	25
SceneCollection.IMethods_Target . . . . .	63
Runtime . . . . .	93
ASMSceneHelper . . . . .	25
InitializeInEditorAttribute . . . . .	64
InitializeInEditorMethodAttribute . . . . .	64
InputBinding . . . . .	64
InputButton . . . . .	65
IQueueable . . . . .	66
SceneOperation . . . . .	119
ISceneCallbacks . . . . .	69
ICollectionClose . . . . .	51
ICollectionCloseAsync . . . . .	52
ICollectionExtraDataCallbacks . . . . .	52
ICollectionExtraDataCallbacksAsync . . . . .	53
ICollectionOpen . . . . .	53
ICollectionOpenAsync . . . . .	54
ICollectionExtraDataCallbacks . . . . .	52
ICollectionExtraDataCallbacksAsync . . . . .	53
ISceneClose . . . . .	70
ISceneCloseAsync . . . . .	70
ISceneOpen . . . . .	73
ISceneOpenAsync . . . . .	73
ISceneCollection . . . . .	71
DynamicCollection . . . . .	44

SceneCollection . . . . .	106
LerpUtility . . . . .	74
LoadingScreenBase . . . . .	76
LoadingScreen . . . . .	75
SplashScreen . . . . .	130
LoadingScreenUtility . . . . .	78
MainThreadUtility . . . . .	80
ObjectReference . . . . .	81
ParallelASMCallbacks . . . . .	82
ProfileDependent< T > . . . . .	85
ProfileDependent< Scene > . . . . .	85
ProfileDependentScene . . . . .	89
ProfileDependent< SceneCollection > . . . . .	85
ProfileDependentCollection . . . . .	86
QueueUtility< T > . . . . .	91
ResolvedCrossReference . . . . .	92
ResolvedReference . . . . .	92
SceneLoader . . . . .	116
SceneLoaderArgsBase . . . . .	117
SceneLoadArgs . . . . .	114
SceneUnloadArgs . . . . .	124
SceneManager . . . . .	118
SceneReferenceCollection . . . . .	17
SceneUtility . . . . .	124
ScriptableObjectUtility . . . . .	127
SerializableDictionary< TKey, TValue > . . . . .	128
SerializableDictionary< Profile, T > . . . . .	128
ProfileDependent< T >.Dict . . . . .	43
SerializableDictionary< string, AdvancedSceneManager.Models.InputBinding > . . . . .	128
SerializableDictionary< string, bool > . . . . .	128
SerializableStringBoolDict . . . . .	128
SettingsProxy . . . . .	129
SpamCheck . . . . .	129
App.StartupProps . . . . .	132
UIFadeExtensions . . . . .	133
UnityCompatibilityHelper . . . . .	134

## Chapter 2

# Class Index

### 2.1 Class List

Here are the classes, structs, unions and interfaces with brief descriptions:

<a href="#">ActionUtility</a>	Contains utility functions for Action . . . . .	19
<a href="#">App</a>	Manages startup and quit processes . . . . .	20
<a href="#">ASMFilePathAttribute</a>	A FilePathAttribute that supports build . . . . .	22
<a href="#">ASMModel</a>	A base class for Profile, SceneCollection and Scene . . . . .	22
<a href="#">ASMModelExtensions</a>	Provides utility methods for working with SceneCollection . . . . .	23
<a href="#">ASMSceneHelper</a>	Represents scene helper. Contains functions for opening / closing collections and scenes from UnityEngine.Events.UnityEvent . . . . .	25
<a href="#">ASMScriptableSingleton&lt; T &gt;</a>	A ScriptableSingleton<T> that supports build . . . . .	28
<a href="#">ASMSettings</a>	Contains the core of ASM assets. Contains projectSettings and assets . . . . .	29
<a href="#">Assets</a>	Manages all ASM assets . . . . .	31
<a href="#">AssetSearchUtility</a>	Provides utility functions for searching ASM assets . . . . .	32
<a href="#">AssetsProxy</a>	Provides access to the scenes, collections and profiles managed by ASM . . . . .	32
<a href="#">Async&lt; T &gt;</a>	Represents a async operation that returns a value . . . . .	33
<a href="#">BuildOption</a>	Represents an enabled state depending on build context (editor, dev build, non-dev build) . . .	33
<a href="#">Callback</a>	Represents a callback that can be run on Phase change, or right before loading screen hide (or when it would, if it was enabled) . . . . .	34
<a href="#">CallbackUtility</a>	An utility class that invokes callbacks (defined in interfaces based on ISceneCallbacks), and tracks performance and provides tools for optimizing and diagnosing bottlenecks in these call- backs . . . . .	36
<a href="#">CanvasSortOrderUtility</a>	An utility class to manage sort order on canvases . . . . .	36

<a href="#">CoroutineUtility</a>	
An utility class that helps with running coroutines detached from MonoBehaviour . . . . .	37
<a href="#">CrossSceneReference</a>	
A reference to a variable that references another object in some other scene . . . . .	39
<a href="#">CrossSceneReferenceUtility</a>	
An utility for saving and restoring cross-scene references . . . . .	39
<a href="#">DefaultScenes</a>	
Provides access to the default ASM scenes . . . . .	40
<a href="#">DependencyInjectionUtility</a>	
Contains utility methods for dependency injection . . . . .	43
<a href="#">ProfileDependent&lt; T &gt;.Dict</a>	
A dictionary of type Profile, T . . . . .	43
<a href="#">DictionaryUtility</a>	
Contains utility functions for working with dictionaries . . . . .	44
<a href="#">DynamicCollection</a>	
Represents a collection that can take a path and then gather all scenes within, guaranteeing that they are all added to build, including non-imported and blacklisted scenes . . . . .	44
<a href="#">CoroutineUtility.Events</a>	
Provides events for coroutine events . . . . .	45
<a href="#">FallbackSceneUtility</a>	
An utility class that manages the default scene, called 'AdvancedSceneManager' . . . . .	47
<a href="#">CallbackUtility.FluentInvokeAPI&lt; T &gt;</a>	
An helper class to facilitate a fluent api . . . . .	47
<a href="#">GlobalCoroutine</a>	
Represents a IEnumerator coroutine started using CoroutineUtility . . . . .	48
<a href="#">GuidReference</a>	
Represents a persistent reference to the GameObject that this is attached to, see also Guid↔ReferenceUtility . . . . .	49
<a href="#">GuidReferenceUtility</a>	
An utility for referencing objects globally . . . . .	50
<a href="#">IApp</a>	51
<a href="#">IAssetsProvider</a>	51
<a href="#">ICollectionClose</a> . . . . .	51
<a href="#">ICollectionCloseAsync</a> . . . . .	52
<a href="#">ICollectionExtraDataCallbacks</a>	
Callbacks for a ScriptableObject that has been set as extra data for a collection . . . . .	52
<a href="#">ICollectionExtraDataCallbacksAsync</a>	
Callbacks for a ScriptableObject that has been set as extra data for a collection . . . . .	53
<a href="#">ICollectionOpen</a> . . . . .	53
<a href="#">ICollectionOpenAsync</a> . . . . .	54
<a href="#">Scene.IMethods.IEvent</a> . . . . .	54
<a href="#">Scene.IMethods_Target.IEvent</a> . . . . .	55
<a href="#">SceneCollection.IMethods.IEvent</a> . . . . .	56
<a href="#">SceneCollection.IMethods_Target.IEvent</a> . . . . .	56
<a href="#">IFadeLoadingScreen</a>	
Used to pass arguments from LoadingScreenUtility.FadeIn>LoadingScreen, float, Color?) . . . . .	57
<a href="#">DependencyInjectionUtility.IInjectable</a>	
Base interface for all injectable services . . . . .	57
<a href="#">ILockable</a>	
Specifies a object that can be locked, using LockUtility . . . . .	57
<a href="#">Scene.IMethods</a> . . . . .	58
<a href="#">SceneCollection.IMethods</a> . . . . .	59
<a href="#">Scene.IMethods_Target</a> . . . . .	61
<a href="#">SceneCollection.IMethods_Target</a> . . . . .	63
<a href="#">InitializeInEditorAttribute</a>	
Initializes a class in editor on recompile . . . . .	64

<a href="#">InitializeInEditorMethodAttribute</a>	
Initializes a class in editor on recompile . . . . .	64
<a href="#">InputBinding</a>	
Represents a input binding for InputSystem. Available even when InputSystem is uninstalled . . . . .	64
<a href="#">InputButton</a>	
Specifies a input binding for use with InputSystem . . . . .	65
<a href="#">IProfileManager</a>	
Manages the current profile . . . . .	65
<a href="#">IProjectSettings</a>	
66	
<a href="#">IQueueable</a>	
Represents a queueable item . . . . .	66
<a href="#">IRuntime</a>	
67	
<a href="#">ISceneCallbacks</a>	
Base interface for ISceneOpen, ISceneClose, ICollectionOpen, ICollectionClose. Does nothing on its own, used by CallbackUtility . . . . .	69
<a href="#">ISceneClose</a>	
Callback for when the scene that a MonoBehaviour is contained within is closed . . . . .	70
<a href="#">ISceneCloseAsync</a>	
70	
<a href="#">ISceneCollection</a>	
Represents the core variables of what makes up a scene collection . . . . .	71
<a href="#">ISceneManager</a>	
71	
<a href="#">ISceneOpen</a>	
Callback for when the scene that a MonoBehaviour is contained within is opened . . . . .	73
<a href="#">ISceneOpenAsync</a>	
73	
<a href="#">LerpUtility</a>	
Provides some convinience functions for lerping . . . . .	74
<a href="#">LoadingScreen</a>	
A class that contains callbacks for loading screens . . . . .	75
<a href="#">LoadingScreenBase</a>	
A generic base class for loading screens. You probably want to inherit from LoadingScreen though . . . . .	76
<a href="#">LoadingScreenUtility</a>	
Manager for loading screens . . . . .	78
<a href="#">MainThreadUtility</a>	
80	
<a href="#">ObjectReference</a>	
A reference to an object in a scene . . . . .	81
<a href="#">ParallelASMCallbacks</a>	
Specifies whatever the ASM callbacks should be run in parallel for any callbacks defined in this script . . . . .	82
<a href="#">Profile</a>	
A profile for ASM, contains settings and collections . . . . .	82
<a href="#">ProfileDependent&lt; T &gt;</a>	
Specifies a <i>T</i> that changes depending on active Profile . . . . .	85
<a href="#">ProfileDependentCollection</a>	
Represents a SceneCollection that changes depending on active Profile . . . . .	86
<a href="#">ProfileDependentScene</a>	
Represents a Scene that changes depending on active Profile . . . . .	89
<a href="#">QueueUtility&lt; T &gt;</a>	
A utility that provides queuing . . . . .	91
<a href="#">ResolvedCrossReference</a>	
Represents a resolved reference . . . . .	92
<a href="#">ResolvedReference</a>	
Represents a resolved ObjectReference . . . . .	92
<a href="#">Runtime</a>	
Manages runtime functionality for Advanced Scene Manager such as open scenes and collection	93

<a href="#">Scene</a>	
Represents a scene	99
<a href="#">SceneCollection</a>	
Represents a collection of scenes	106
<a href="#">SceneCollectionTemplate</a>	
Represents a template for a SceneCollection	111
<a href="#">SceneLoadArgs</a>	
Specifies arguments for SceneLoader.LoadScene(Models.Scene, SceneLoadArgs)	114
<a href="#">SceneLoader</a>	
Specifies a scene loader	116
<a href="#">SceneLoaderArgsBase</a>	
Base class for SceneLoadArgs and SceneUnloadArgs	117
<a href="#">SceneManager</a>	
The central Advanced Scene Manager API. Provides access to the most important things in ASM	118
<a href="#">SceneOperation</a>	
A scene operation is a queueable operation that can open or close scenes. See also: Scene↔	
Action	119
<a href="#">SceneUnloadArgs</a>	
Specifies arguments for SceneLoader.UnloadScene(Models.Scene, SceneUnloadArgs)	124
<a href="#">SceneUtility</a>	
An utility class to perform actions on scenes	124
<a href="#">ScriptableObjectUtility</a>	
Contains utility methods for ScriptableObject	127
<a href="#">SerializableDictionary&lt; TKey, TValue &gt;</a>	
A serializable dictionary	128
<a href="#">SerializableStringBoolDict</a>	
A serializable dictionary of string and bool	128
<a href="#">SettingsProxy</a>	
Provides access to ASM settings	129
<a href="#">SpamCheck</a>	
Provides an easy way to check for spamming	129
<a href="#">SplashScreen</a>	
A class that contains callbacks for splash screens	130
<a href="#">StandaloneCollection</a>	
Represents a collection of standalone scenes. These scenes are guaranteed to be included in build (if the associated Profile is active)	132
<a href="#">App.StartupProps</a>	
An object that persists start properties across domain reload, which is needed when configurable enter play mode is set to reload domain on enter play mode	132
<a href="#">UIFadeExtensions</a>	
Provides extension methods for CanvasGroup	133
<a href="#">UnityCompatibilityHelper</a>	
Contains helpers for dealing with multiple versions of unity	134

## Chapter 3

# Namespace Documentation

### 3.1 AdvancedSceneManager Namespace Reference

#### Classes

- class [SceneManager](#)

*The central Advanced Scene Manager API. Provides access to the most important things in ASM.*

### 3.2 AdvancedSceneManager.Callbacks Namespace Reference

#### Classes

- class [ActionUtility](#)

*Contains utility functions for Action.*

- class [CallbackUtility](#)

*An utility class that invokes callbacks (defined in interfaces based on [ISceneCallbacks](#)), and tracks performance and provides tools for optimizing and diagnosing bottlenecks in these callbacks.*

- interface [ICollectionClose](#)
- interface [ICollectionCloseAsync](#)
- interface [ICollectionExtraDataCallbacks](#)

*Callbacks for a ScriptableObject that has been set as extra data for a collection.*

- interface [ICollectionExtraDataCallbacksAsync](#)

*Callbacks for a ScriptableObject that has been set as extra data for a collection.*

- interface [ICollectionOpen](#)
- interface [ICollectionOpenAsync](#)
- interface [ISceneCallbacks](#)

*Base interface for [ISceneOpen](#), [ISceneClose](#), [ICollectionOpen](#), [ICollectionClose](#). Does nothing on its own, used by [CallbackUtility](#).*

- interface [ISceneClose](#)

*Callback for when the scene that a MonoBehaviour is contained within is closed.*

- interface [ISceneCloseAsync](#)
- interface [ISceneOpen](#)

*Callback for when the scene that a MonoBehaviour is contained within is opened.*

- interface [ISceneOpenAsync](#)
- class [LoadingScreen](#)

- A class that contains callbacks for loading screens.*

  - class [LoadingScreenBase](#)

*A generic base class for loading screens. You probably want to inherit from LoadingScreen though.*
  - class [ParallelASMCallbacks](#)

*Specifies whatever the ASM callbacks should be run in parallel for any callbacks defined in this script.*
  - class [SplashScreen](#)

*A class that contains callbacks for splash screens.*

### 3.3 AdvancedSceneManager.Core Namespace Reference

#### Classes

- class [App](#)

*Manages startup and quit processes.*
- class [Callback](#)

*Represents a callback that can be run on Phase change, or right before loading screen hide (or when it would, if it was enabled).*
- class [Runtime](#)

*Manages runtime functionality for Advanced Scene Manager such as open scenes and collection.*
- class [SceneLoadArgs](#)

*Specifies arguments for SceneLoader.LoadScene(Models.Scene, SceneLoadArgs).*
- class [SceneLoader](#)

*Specifies a scene loader.*
- class [SceneLoaderArgsBase](#)

*Base class for SceneLoadArgs and SceneUnloadArgs.*
- class [SceneOperation](#)

*A scene operation is a queueable operation that can open or close scenes. See also: SceneAction.*
- class [SceneUnloadArgs](#)

*Specifies arguments for SceneLoader.UnloadScene(Models.Scene, SceneUnloadArgs).*

#### Enumerations

- enum [Phase](#) {  
[CloseCallbacks](#) , [UnloadScenes](#) , [LoadScenes](#) , [OpenCallbacks](#) ,  
[CustomActions](#) }  

*The phase that a SceneOperation is currently in.*

#### 3.3.1 Enumeration Type Documentation

##### 3.3.1.1 Phase

enum [Phase](#)

The phase that a SceneOperation is currently in.

## Enumerator

CloseCallbacks	The scene operation is currently executing close callbacks on the scenes that are being closed, if any.
UnloadScenes	The scene operation is currently unloading the scenes, if any.
LoadScenes	The scene operation is currently loading the scenes, if any.
OpenCallbacks	The scene operation is currently executing open callbacks on the scenes that are being opened, if any.
CustomActions	The scene operation is currently executing custom actions, added through SceneOperation.WithAction(SceneAction[]) or similar methods, if any.

## 3.4 AdvancedSceneManager.DependencyInjection Namespace Reference

## Classes

- class [DependencyInjectionUtility](#)  
*Contains utility methods for dependency injection.*
- interface [IApp](#)
- interface [IAssetsProvider](#)
- interface [IProfileManager](#)  
*Manages the current profile.*
- interface [IProjectSettings](#)
- interface [IRuntime](#)
- interface [ISceneManager](#)

## 3.5 AdvancedSceneManager.DependencyInjection.Editor Namespace Reference

## 3.6 AdvancedSceneManager.Models Namespace Reference

## Classes

- class [ASMMModel](#)  
*A base class for Profile, SceneCollection and Scene.*
- class [ASMMModelExtensions](#)  
*Provides utility methods for working with SceneCollection.*
- class [ASMSceneHelper](#)  
*Represents scene helper. Contains functions for opening / closing collections and scenes from UnityEngine.Events.↔ UnityEvent.*
- class [ASMSettings](#)  
*Contains the core of ASM assets. Contains projectSettings and assets*
- class [DynamicCollection](#)  
*Represents a collection that can take a path and then gather all scenes within, guaranteeing that they are all added to build, including non-imported and blacklisted scenes.*
- interface [ILockable](#)

- Specifies a object that can be locked, using LockUtility.*

  - class [InputBinding](#)

*Represents a input binding for InputSystem. Available even when InputSystem is uninstalled.*
  - struct [InputButton](#)

*Specifies a input binding for use with InputSystem.*
  - interface [ISceneCollection](#)

*Represents the core variables of what makes up a scene collection.*
  - class [Profile](#)

*A profile for ASM, contains settings and collections.*
  - class [Scene](#)

*Represents a scene.*
  - class [SceneCollection](#)

*Represents a collection of scenes.*
  - class [StandaloneCollection](#)

*Represents a collection of standalone scenes. These scenes are guaranteed to be included in build (if the associated Profile is active).*

## Enumerations

- enum [InputBindingInteractionType](#) { [Open](#) , [Hold](#) , [Toggle](#) }
 

*Specifies the interaction type to use for scene bindings.*

### 3.6.1 Enumeration Type Documentation

#### 3.6.1.1 InputBindingInteractionType

enum [InputBindingInteractionType](#)

Specifies the interaction type to use for scene bindings.

##### Enumerator

Open	Specifies that the scene or collection will be opened automatically, but not closed.
Hold	Specifies that the scene or collection will be opened automatically on button down, then closed on button up.
Toggle	Specifies that the scene or collection will be opened automatically on button down, then closed on next button down.

## 3.7 AdvancedSceneManager.Models.Enums Namespace Reference

### Enumerations

- enum [CollectionLoadingThreadPriority](#) {
   
[Auto](#) = -2 , [Low](#) = ThreadPriority.Low , [BelowNormal](#) = ThreadPriority.BelowNormal , [Normal](#) = ThreadPriority.Normal ,
   
[High](#) = ThreadPriority.High }
 

*Wrapper for ThreadPriority, adds CollectionLoadingThreadPriority.Auto.*

- enum `CollectionStartupOption` { `Auto` , `Open` , `DoNotOpen` }  
*Specifies what to do with a SceneCollection during startup.*
- enum `EditorPersistentOption` { `Never` , `WhenAnyOfTheFollowingScenesAreOpened` , `AnySceneOpened` }  
*Specifies whatever a scene should be automatically opened outside of play-mode.*
- enum `LoadingScreenUsage` { `DoNotUse` , `UseDefault` , `Override` }  
*Specifies what loading screen to use, if any.*
- enum `SceneImportOption` { `Manual` , `SceneCreated` }  
*Specifies how to scenes are imported.*
- enum `SceneState` {  
    `Unknown` , `NotOpen` , `Queued` , `Opening` ,  
    `Preloading` , `Preloaded` , `Open` }  
*Specifies that state of a scene.*

### 3.7.1 Enumeration Type Documentation

#### 3.7.1.1 CollectionLoadingThreadPriority

enum `CollectionLoadingThreadPriority`

Wrapper for ThreadPriority, adds CollectionLoadingThreadPriority.Auto.

ThreadPriority:

Enumerator

Auto	Automatically decide ThreadPriority based on if loading screen is open.
Low	Lowest thread priority.
BelowNormal	Below normal thread priority.
Normal	Normal thread priority.
High	Highest thread priority.

#### 3.7.1.2 CollectionStartupOption

enum `CollectionStartupOption`

Specifies what to do with a SceneCollection during startup.

Enumerator

Auto	Specifies that ASM should automatically decide if a SceneCollection should be opened during startup. This means that if no collection in the list specifies either Open or OpenAsPersistent, then the first collection in the list that has Auto will be opened.
Open	Specifies that a SceneCollection will open during startup.
DoNotOpen	Specifies that a SceneCollection will not open during startup.

### 3.7.1.3 EditorPersistentOption

enum `EditorPersistentOption`

Specifies whatever a scene should be automatically opened outside of play-mode.

Enumerator

Never	Never automatically open scene.
WhenAnyOfTheFollowingScenesAreOpened	Automatically open scene when any specified scene is opened.
AnySceneOpened	Automatically open scene when any scene opens.

### 3.7.1.4 LoadingScreenUsage

enum `LoadingScreenUsage`

Specifies what loading screen to use, if any.

Enumerator

DoNotUse	Specifies no loading screen.
UseDefault	Specifies default loading screen, defined in profile settings.
Override	Specifies overridden loading screen, defined in SceneCollection.

### 3.7.1.5 SceneImportOption

enum `SceneImportOption`

Specifies how to scenes are imported.

Enumerator

Manual	User will manually import scenes.
SceneCreated	Scenes will be automatically imported when created, otherwise manual.

### 3.7.1.6 SceneState

enum `SceneState`

Specifies that state of a scene.

Enumerator

Unknown	The state of the scene is unknown. (An issue probably occurred while checking state)
NotOpen	The scene is not open.
Queued	The scene is in queue to be opened.

## Enumerator

Opening	The scene is currently being opened. Mutually exclusive to Preloading.
Preloading	The scene is currently being preloaded. Mutually exclusive to Opening.
Preloaded	The scene is currently preloaded.
Open	The scene is open.

## 3.8 AdvancedSceneManager.Models.Helpers Namespace Reference

## Classes

- class [AssetsProxy](#)  
*Provides access to the scenes, collections and profiles managed by ASM.*
- class [DefaultScenes](#)  
*Provides access to the default ASM scenes.*
- class [SettingsProxy](#)  
*Provides access to ASM settings.*

## 3.9 AdvancedSceneManager.Models.Internal Namespace Reference

## Classes

- class [Assets](#)  
*Manages all ASM assets.*

## 3.10 AdvancedSceneManager.Models.Utility Namespace Reference

## Classes

- class [BuildOption](#)  
*Represents an enabled state depending on build context (editor, dev build, non-dev build).*
- class [ProfileDependent](#)  
*Specifies a T that changes depending on active Profile.*
- class [ProfileDependentCollection](#)  
*Represents a SceneCollection that changes depending on active Profile.*
- class [ProfileDependentScene](#)  
*Represents a Scene that changes depending on active Profile.*
- class [SceneCollectionTemplate](#)  
*Represents a template for a SceneCollection.*

## 3.11 AdvancedSceneManager.Utility Namespace Reference

### Classes

- class [ASMFilePathAttribute](#)  
*A FilePathAttribute that supports build.*
- class [ASMScriptableSingleton](#)  
*A ScriptableSingleton< T> that supports build.*
- class [AssetSearchUtility](#)  
*Provides utility functions for searching ASM assets.*
- class [Async](#)  
*Represents a async operation that returns a value.*
- class [CanvasSortOrderUtility](#)  
*An utility class to manage sort order on canvases.*
- class [DictionaryUtility](#)  
*Contains utility functions for working with dictionaries.*
- class [FallbackSceneUtility](#)  
*An utility class that manages the default scene, called 'AdvancedSceneManager'.*
- class [GuidReference](#)  
*Represents a persistent reference to the GameObject that this is attached to, see also GuidReferenceUtility .*
- class [GuidReferenceUtility](#)  
*An utility for referencing objects globally.*
- interface [IFadeLoadingScreen](#)  
*Used to pass arguments from LoadingScreenUtility.FadeIn>LoadingScreen, float, Color?)*
- class [InitializeInEditorAttribute](#)  
*Initializes a class in editor on recompile.*
- class [InitializeInEditorMethodAttribute](#)  
*Initializes a class in editor on recompile.*
- interface [IQueueable](#)  
*Represents a queueable item.*
- class [LerpUtility](#)  
*Provides some convinience functions for lerping.*
- class [LoadingScreenUtility](#)  
*Manager for loading screens.*
- class [QueueUtility](#)  
*A utility that provides queuing.*
- class [SceneUtility](#)  
*An utility class to perform actions on scenes.*
- class [ScriptableObjectUtility](#)  
*Contains utility methods for ScriptableObject.*
- class [SerializableDictionary](#)  
*A serializable dictionary.*
- class [SerializableStringBoolDict](#)  
*A serializable dictionary of string and bool.*
- class [SpamCheck](#)  
*Provides an easy way to check for spamming.*
- class [UIFadeExtensions](#)  
*Provides extension methods for CanvasGroup.*
- class [UnityCompatibilityHelper](#)  
*Contains helpers for dealing with multiple versions of unity.*

## 3.12 AdvancedSceneManager.Utility.CrossSceneReferences Namespace Reference

### Classes

- class [CrossSceneReference](#)  
*A reference to a variable that references another object in some other scene.*
- class [CrossSceneReferenceUtility](#)  
*An utility for saving and restoring cross-scene references.*
- class [ObjectReference](#)  
*A reference to an object in a scene.*
- struct [ResolvedCrossReference](#)  
*Represents a resolved reference.*
- struct [ResolvedReference](#)  
*Represents a resolved ObjectReference.*
- class [SceneReferenceCollection](#)  
*A collection of CrossSceneReference for a scene. [More...](#)*

### Enumerations

- enum [ResolveStatus](#)  
*Specifies the result of a resolve.*
- enum [SceneStatus](#) { [Default](#) , [Restored](#) , [Cleared](#) }  
*Specifies the state of a scene.*

### 3.12.1 Class Documentation

#### 3.12.1.1 class AdvancedSceneManager::Utility::CrossSceneReferences::SceneReferenceCollection

A collection of CrossSceneReference for a scene.

### 3.12.2 Enumeration Type Documentation

#### 3.12.2.1 SceneStatus

enum [SceneStatus](#)

Specifies the state of a scene.

#### Enumerator

Default	Cross-scene reference utility has not done anything to this scene.
Restored	Cross-scene reference utility has restored references in this scene.
Cleared	Cross-scene reference utility has cleared references in this scene.

### 3.13 Lazy Namespace Reference

### 3.14 Lazy.Utility Namespace Reference

#### Classes

- class [CoroutineUtility](#)  
*An utility class that helps with running coroutines detached from MonoBehaviour.*
- class [GlobalCoroutine](#)  
*Represents a IEnumerator coroutine started using CoroutineUtility.*
- class [MainThreadUtility](#)

## Chapter 4

# Class Documentation

### 4.1 ActionUtility

Contains utility functions for Action.

#### Static Public Member Functions

- static void **LogInvoke** (this Action action)  
*Tries to invoke the action, then logs error to the console if an error occurred.*
- static void **TryInvoke** (this Action action)  
*Tries to invoke the action, eats the exception.*
- static bool **TryInvoke** (this Action action, [NotNullWhen(false)] out Exception exception)  
*Tries to invoke the action.*

#### 4.1.1 Detailed Description

Contains utility functions for Action.

#### 4.1.2 Member Function Documentation

##### 4.1.2.1 TryInvoke()

```
static bool TryInvoke (  
    this Action action,  
    [NotNullWhen(false)] out Exception exception ) [static]
```

Tries to invoke the action.

#### Parameters

<i>action</i>	The action to invoke.
<i>exception</i>	The exception that occurred when invoking action. null if true was returned.

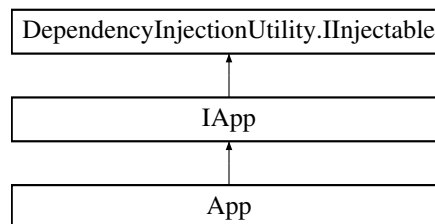

**Returns**

`true` if invoke succeeded with no exception.

## 4.2 App

Manages startup and quit processes.

Inheritance diagram for App:

**Classes**

- class [StartupProps](#)

*An object that persists start properties across domain reload, which is needed when configurable enter play mode is set to reload domain on enter play mode.*

**Public Member Functions**

- void **Restart** ([StartupProps](#) props=null)
- [Async](#)< bool > **RestartAsync** ([StartupProps](#) props=null)
- void **RegisterQuitCallback** (IEnumerator coroutine)  
*Register a callback to be called before quit.*
- void **UnregisterQuitCallback** (IEnumerator coroutine)  
*Unregister a callback that was to be called before quit.*
- void [CancelQuit](#) ()  
*Cancels a quit in progress.*
- void [Quit](#) (bool fade=true, Color? fadeColor=null, float fadeDuration=1)  
*Quits the game, and calls quitCallbacks, optionally with a fade animation.*
- void [Exit](#) ()  
*Exits the game like you normally would in unity.*

**Properties**

- [StartupProps](#) **startupProps** [get, set]  
*Gets the props that should be used for startup process.*
- bool **isStartupFinished** [get]  
*Gets if startup process is finished.*
- bool **isRestart** [get]  
*Gets if ASM has been restarted, or is currently restarting.*
- bool **isQuitting** [get]  
*Gets whatever ASM is currently in the process of quitting.*

## Events

- Action **beforeRestart**  
*Occurs before restart process has begun, but has been initiated.*
- Action **afterRestart**  
*Occurs after restart has been completed.*

### 4.2.1 Detailed Description

Manages startup and quit processes.

Usage: SceneManager.app.

### 4.2.2 Member Function Documentation

#### 4.2.2.1 CancelQuit()

```
void CancelQuit ( )
```

Cancels a quit in progress.

Only usable during a RegisterQuitCallback(IEnumerator) or while isQuitting is true.

Implements [IApp](#).

#### 4.2.2.2 Exit()

```
void Exit ( )
```

Exits the game like you normally would in unity.

No callbacks will be called, and no fade out will occur.

Implements [IApp](#).

#### 4.2.2.3 Quit()

```
void Quit (
    bool fade = true,
    Color? fadeColor = null,
    float fadeDuration = 1 )
```

Quits the game, and calls quitCallbacks, optionally with a fade animation.

#### Parameters

<i>fade</i>	Specifies whatever screen should fade out.
<i>fadeColor</i>	Defaults to ProjectSettings.buildUnitySplashScreenColor.
<i>fadeDuration</i>	Specifies the duration of the fade out.

Implements [IApp](#).

## 4.3 ASMFilePathAttribute

A FilePathAttribute that supports build.

Inherits Attribute.

### Properties

- string **path** [get]  
*The path to the associated ScriptableSingleton<T>.*

### 4.3.1 Detailed Description

A FilePathAttribute that supports build.

## 4.4 ASMModel

A base class for Profile, SceneCollection and Scene.

Inheritance diagram for ASMModel:

### Public Member Functions

- virtual void **Save** ()  
*Saves the singleton to disk after a delay.*
- void **SaveNow** ()  
*Saves the singleton to disk.*
- void **SaveNow** (bool setDirty=true)  
*Saves the singleton to disk.*
- virtual bool **IsMatch** (string q)  
*Gets if q matches name.*

### Static Public Member Functions

- static string **GenerateID** ()  
*Generate id.*

### Static Protected Member Functions

- static T **CreateInternal**< T > (string **name**)  
*Creates a profile. Throws if name is invalid.*

### Properties

- string **id** [get]  
*Gets the id of this ASMModel.*
- new string **name** [get, protected set]

## 4.4.1 Detailed Description

A base class for Profile, SceneCollection and Scene.

## 4.4.2 Member Function Documentation

### 4.4.2.1 Save()

```
virtual void Save ( ) [virtual]
```

Saves the singleton to disk after a delay.

Can be called outside of editor, but has no effect.

### 4.4.2.2 SaveNow() [1/2]

```
void SaveNow ( )
```

Saves the singleton to disk.

Can be called outside of editor, but has no effect.

### 4.4.2.3 SaveNow() [2/2]

```
void SaveNow (
    bool setDirty = true )
```

Saves the singleton to disk.

Can be called outside of editor, but has no effect.

## 4.5 ASMModelExtensions

Provides utility methods for working with SceneCollection.

## Static Public Member Functions

- static int [IndexOf< T >](#) (this T collection, [Scene](#) scene)  
*Finds the index of scene .*
- static [SceneOperation](#) **OpenAdditive** (this IEnumerable< [SceneCollection](#) > collections)  
*Opens the collections as additive.*
- static [SceneOperation](#) **OpenAdditive** (this IEnumerable< [SceneCollection](#) > collections, [SceneCollection](#) activeCollection)  
*Opens the collections as additive.*
- static [SceneOperation](#) **OpenAdditive** (this IEnumerable< [SceneCollection](#) > collections, [SceneCollection](#) activeCollection, [Scene](#) loadingScene)  
*Opens the collections as additive.*
- static [SceneOperation](#) **OpenWithAdditive** (this [SceneCollection](#) collection, params [SceneCollection](#)[] extraAdditiveCollections)  
*Opens this collection and then opens extraAdditiveCollections as additive.*
- static [SceneOperation](#) **OpenAll** (this IEnumerable< [Scene](#) > scenes)  
*Opens the scenes .*
- static [SceneOperation](#) **OpenAll** (this IEnumerable< [Scene](#) > scenes, [Scene](#) loadingScene)  
*Opens the scenes .*
- static [SceneOperation](#) **CloseAll** (this IEnumerable< [Scene](#) > scenes)  
*Closes the scenes .*
- static [SceneOperation](#) **CloseAll** (this IEnumerable< [Scene](#) > scenes, [Scene](#) loadingScene)  
*Closes the scenes .*

## 4.5.1 Detailed Description

Provides utility methods for working with SceneCollection.

## 4.5.2 Member Function Documentation

### 4.5.2.1 CloseAll()

```
static SceneOperation CloseAll (
    this IEnumerable< Scene > scenes,
    Scene loadingScene ) [static]
```

Closes the *scenes* .

#### Parameters

<i>loadingScene</i>	Cover this operation with <i>loadingScene</i> .
---------------------	---

### 4.5.2.2 IndexOf< T >()

```
static int IndexOf< T > (
    this T collection,
    Scene scene ) [static]
```

Finds the index of *scene* .

Returns -1 if it does not exist.

#### Type Constraints

***T : ISceneCollection***

#### 4.5.2.3 OpenAdditive() [1/2]

```
static SceneOperation OpenAdditive (
    this IEnumerable< SceneCollection > collections,
    SceneCollection activeCollection ) [static]
```

Opens the *collections* as additive.

If *activeCollection* is part of *collections* , then it will only be opened once, not as additive.

#### 4.5.2.4 OpenAdditive() [2/2]

```
static SceneOperation OpenAdditive (
    this IEnumerable< SceneCollection > collections,
    SceneCollection activeCollection,
    Scene loadingScene ) [static]
```

Opens the *collections* as additive.

If *activeCollection* is part of *collections* , then it will only be opened once, not as additive.

#### 4.5.2.5 OpenAll()

```
static SceneOperation OpenAll (
    this IEnumerable< Scene > scenes,
    Scene loadingScene ) [static]
```

Opens the *scenes* .

#### Parameters

<i>loadingScene</i>	Cover this operation with <i>loadingScene</i> .
---------------------	---

## 4.6 ASMSceneHelper

Represents scene helper. Contains functions for opening / closing collections and scenes from UnityEngine.Events.UnityEvent.

Inheritance diagram for ASMSceneHelper:

## Public Member Functions

- **SceneOperation Open** ([SceneCollection](#) collection, bool openAll=false)
- **SceneOperation OpenAdditive** ([SceneCollection](#) collection, bool openAll=false)
- **SceneOperation ToggleOpen** ([SceneCollection](#) collection, bool openAll=false)
- **SceneOperation Close** ([SceneCollection](#) collection)
- void **\_Open** ([SceneCollection](#) collection)
- void **\_OpenAdditive** ([SceneCollection](#) collection)
- void **\_ToggleOpen** ([SceneCollection](#) collection)
- void **\_Close** ([SceneCollection](#) collection)
- **SceneOperation Open** ([Scene](#) scene)
  - Opens the specified scene.*
- **SceneOperation OpenAndActivate** ([Scene](#) scene)
  - Opens the scene and activates it.*
- **SceneOperation ToggleOpen** ([Scene](#) scene)
  - Toggles the open state of the specified scene.*
- **SceneOperation Close** ([Scene](#) scene)
  - Closes the specified scene.*
- **SceneOperation Preload** ([Scene](#) scene, Action onPreloaded=null)
  - Preloads the specified scene, to be displayed at a later time. See also: FinishPreload(Scene), DiscardPreload(←Scene).*
- **SceneOperation FinishPreload** ([Scene](#) scene)
  - Finishes preloading the specified scene, displaying it.*
- **SceneOperation DiscardPreload** ([Scene](#) scene)
  - Discards the specified scene, if preloaded.*
- **SceneOperation OpenWithLoadingScreen** ([Scene](#) scene, [Scene](#) loadingScene)
  - Opens the specified scene while a loading screen is open.*
- void **SetActive** ([Scene](#) scene)
  - Sets the specified scene as active in heirarchy.*
- void **\_Open** ([Scene](#) scene)
- void **\_OpenAndActivate** ([Scene](#) scene)
- void **\_ToggleOpen** ([Scene](#) scene)
- void **\_Close** ([Scene](#) scene)
- void **\_Preload** ([Scene](#) scene)
- void **\_FinishPreload** ([Scene](#) scene)
- void **\_DiscardPreload** ([Scene](#) scene)
- void **\_SetActive** ([Scene](#) scene)
- void **OpenWhereNameStartsWith** (string [name](#))
  - Open all scenes that starts with the specified name.*
- void **Quit** ()
- void **Restart** ()
- void **RestartCollection** ()

## Properties

- new string **name** [get]
- static [ASMSceneHelper](#) **instance** [get]
  - Gets a reference to scene helper.*

### 4.6.1 Detailed Description

Represents scene helper. Contains functions for opening / closing collections and scenes from UnityEngine.↔  
Events.UnityEvent.

## 4.6.2 Member Function Documentation

### 4.6.2.1 Close()

```
SceneOperation Close (
    Scene scene )
```

Closes the specified scene.

Already closed scenes not affected.

Implements [Scene.IMethods\\_Target](#).

### 4.6.2.2 FinishPreload()

```
SceneOperation FinishPreload (
    Scene scene )
```

Finishes preloading the specified scene, displaying it.

Scene must be preloaded beforehand.

Implements [Scene.IMethods\\_Target](#).

### 4.6.2.3 Open()

```
SceneOperation Open (
    Scene scene )
```

Opens the specified scene.

Already open scenes not affected.

Implements [Scene.IMethods\\_Target](#).

### 4.6.2.4 Preload()

```
SceneOperation Preload (
    Scene scene,
    Action onPreloaded = null )
```

Preloads the specified scene, to be displayed at a later time. See also: [FinishPreload\(Scene\)](#), [DiscardPreload\(↔Scene\)](#).

Scene must be closed beforehand.

Implements [Scene.IMethods\\_Target](#).

## 4.7 ASMScriptableSingleton< T >

A ScriptableSingleton<T> that supports build.

Inherits ScriptableObject, and INotifyPropertyChanged.

### Public Member Functions

- virtual void [Save](#) ()  
*Saves the singleton to disk after a delay.*
- void [SaveNow](#) ()  
*Saves the singleton to disk.*

### Properties

- virtual bool **editorOnly** [get]  
*Specifies that build support will not be applied to this ScriptableSingleton<T>.*

### 4.7.1 Detailed Description

A ScriptableSingleton<T> that supports build.

#### Type Constraints

**T**: [ASMScriptableSingleton<T>](#)

### 4.7.2 Member Function Documentation

#### 4.7.2.1 Save()

```
virtual void Save ( ) [virtual]
```

Saves the singleton to disk after a delay.

Can be called outside of editor, but has no effect.

#### 4.7.2.2 SaveNow()

```
void SaveNow ( )
```

Saves the singleton to disk.

Can be called outside of editor, but has no effect.

## 4.8 ASMSettings

Contains the core of ASM assets. Contains projectSettings and assets

Inheritance diagram for ASMSettings:

### Static Public Member Functions

- static void **OnInitialized** (Action action)  
Runs the callback when ASMSettings has initialized.

### Properties

- Profile **defaultProfile** [get, set]  
The profile to use when none is set.
- Profile **forceProfile** [get, set]  
The profile to force everyone in this project to use.
- Profile **buildProfile** [get]  
The profile to use during build.
- bool **checkForDuplicateSceneOperations** [get, set]  
By default, ASM checks for duplicate scene operations, since this is usually caused by mistake, but this will disable that.
- bool **preventSpammingEventMethods** [get, set]  
By default, ASM will prevent spam calling event methods (i.e. calling Scene.Open() from a button press), but this will disable that.
- float **spamCheckCooldown** [get, set]  
Sets the default cooldown for SpamCheck.
- bool **enableCrossSceneReferences** [get, set]  
Gets or sets whatever cross-scene references should be enabled.
- SceneImportOption **sceneImportOption** [get, set]  
Gets or sets when to automatically import scenes.
- bool **allowExcludingCollectionsFromBuild** [get, set]  
Specifies whatever collections can be excluded from build.
- bool **reverseUnloadOrderOnCollectionClose** [get, set]  
Specifies whatever collections should unload scenes in the reverse order.
- string **assetPath** [get, set]  
Specifies the path where profiles and imported scenes should be generated to.
- CustomData **customData** [get]  
Specifies custom data.
- Color **buildUnitySplashScreenColor** [get]  
This is the color of the unity splash screen, used to make the transition from unity splash screen to ASM smooth, this is set before building. Color.black is used when the unity splash screen is disabled.

- bool **allowSceneLocking** [get, set]  
*Specifies whatever asm will allow locking scenes.*
- bool **allowCollectionLocking** [get, set]  
*Specifies whatever asm will allow locking collections.*
- [Scene](#) **fadeScene** [get, set]  
*Specifies the scene to use for certain methods, i.e. [LoadingScreenUtility.FadeOut\(float, Color?, Action<float>\)](#).*

## Properties inherited from [ASMScriptableSingleton< ASMSettings >](#)

- virtual bool **editorOnly** [get]  
*Specifies that build support will not be applied to this ScriptableSingleton<T>.*

## Properties inherited from [IProjectSettings](#)

### Additional Inherited Members

## Public Member Functions inherited from [ASMScriptableSingleton< ASMSettings >](#)

- virtual void [Save](#) ()  
*Saves the singleton to disk after a delay.*
- void [SaveNow](#) ()  
*Saves the singleton to disk.*

## Public Member Functions inherited from [IProjectSettings](#)

- void **Save** ()
- void **SaveNow** ()

### 4.8.1 Detailed Description

Contains the core of ASM assets. Contains projectSettings and assets

Only available in editor.

### 4.8.2 Property Documentation

#### 4.8.2.1 allowExcludingCollectionsFromBuild

```
bool allowExcludingCollectionsFromBuild [get], [set]
```

Specifies whatever collections can be excluded from build.

When `true`, a toggle will be shown in scene manager window.

Implements [IProjectSettings](#).

#### 4.8.2.2 enableCrossSceneReferences

```
bool enableCrossSceneReferences [get], [set]
```

Gets or sets whatever cross-scene references should be enabled.

Experimental.

Implements [IProjectSettings](#).

## 4.9 Assets

Manages all ASM assets.

### Properties

- static IEnumerable< [Profile](#) > **profiles** [get]  
*Enumerates all imported profiles.*
- static IEnumerable< [SceneCollection](#) > **collections** [get]  
*Enumerates all imported collections.*
- static IEnumerable< [SceneCollectionTemplate](#) > **collectionTemplates** [get]  
*Enumerates all imported collection templates.*
- static IEnumerable< [Scene](#) > **scenes** [get]  
*Enumerates all imported scenes.*
- static [ASMSceneHelper](#) **sceneHelper** [get]  
*Gets scene helper singleton.*
- static [DefaultScenes](#) **defaultScenes** [get]  
*Gets default scenes singleton.*
- static IEnumerable< Object > **allAssets** [get]  
*Enumerates all imported assets.*
- static string [assetPath](#) [get]  
*Gets the import path.*
- static string **fallbackScenePath** [get]  
*Gets the path to the fallback scene.*

### 4.9.1 Detailed Description

Manages all ASM assets.

### 4.9.2 Property Documentation

#### 4.9.2.1 assetPath

```
string assetPath [static], [get]
```

Gets the import path.

Can be changed using `ProjectSettings.assetPath`

## 4.10 AssetSearchUtility

Provides utility functions for searching ASM assets.

### Static Public Member Functions

- static T **Find**< T > (string q)  
*Finds the T with the specified name.*
- static bool **TryFind**< T > (string q, out T result)  
*Finds the T with the specified name.*
- static T **Find**< T > (this T[] list, string q)
- static bool **TryFind**< T > (this T[] list, string q, out T result)
- static T **Find**< T > (this IEnumerable< T > list, string q)
- static bool **TryFind**< T > (this IEnumerable< T > list, string q, out T result)

### 4.10.1 Detailed Description

Provides utility functions for searching ASM assets.

## 4.11 AssetsProxy

Provides access to the scenes, collections and profiles managed by ASM.

Inheritance diagram for AssetsProxy:

### Public Member Functions

- IEnumerable< T > **Enumerate**< T > ()  
*Enumerates T.*

### Properties

- IEnumerable< [Profile](#) > **profiles** [get]  
*Enumerates all profiles in the project.*
- IEnumerable< [Scene](#) > **scenes** [get]  
*Enumerates all scenes.*
- IEnumerable< [SceneCollection](#) > **collections** [get]  
*Enumerates all collections.*
- IEnumerable< [SceneCollectionTemplate](#) > **templates** [get]  
*Enumerates all templates.*
- [DefaultScenes](#) **defaults** [get]  
*Provides access to the default ASM scenes.*

### 4.11.1 Detailed Description

Provides access to the scenes, collections and profiles managed by ASM.

## 4.12 Async< T >

Represents a async operation that returns a value.

Inherits CustomYieldInstruction.

### Public Member Functions

- void **OnComplete** (Action< T > callback)  
*Calls the callback when the async operation is complete.*

### Properties

- static Async< T > **complete** = new(null) [get]  
*Gets a Async< T > that is already completed.*
- T **value** [get, set]  
*Gets the value that was produced by the async operation.*

### 4.12.1 Detailed Description

Represents a async operation that returns a value.

## 4.13 BuildOption

Represents an enabled state depending on build context (editor, dev build, non-dev build).

Inherits INotifyPropertyChanged.

### Public Member Functions

- bool **GetIsEnabledInCurrentContext** ()  
*Get whatever we should be enabled in the current context.*

### Properties

- bool **enableInEditor** [get, set]  
*Gets whatever we should be enabled in editor.*
- bool **enableInDevBuild** [get, set]  
*Gets whatever we should be enabled in dev build.*
- bool **enableInNonDevBuild** [get, set]  
*Gets whatever we should be enabled in non-dev build.*

### 4.13.1 Detailed Description

Represents an enabled state depending on build context (editor, dev build, non-dev build).

## 4.14 Callback

Represents a callback that can be run on Phase change, or right before loading screen hide (or when it would, if it was enabled).

### Public Types

- enum [When](#) { [Before](#) , [After](#) }  
*Specifies when to run the callback on a given Phase.*

### Public Member Functions

- [Callback Do](#) (Action [action](#))  
*Performs the specified callback.*
- [Callback Do](#) (Func< IEnumerator > [enumerator](#))  
*Performs the specified callback.*
- [Callback Do](#) (GlobalCoroutine [coroutine](#))  
*Performs the specified callback.*
- [Callback Do](#) (float delay)  
*Performs the specified callback.*

### Static Public Member Functions

- static implicit **operator Callback** (Action [action](#))  
*Converts to Callback.*
- static implicit **operator Callback** (Func< IEnumerator > [enumerator](#))  
*Converts to Callback.*
- static implicit **operator Callback** (GlobalCoroutine [coroutine](#))  
*Converts to Callback.*
- static [Callback AfterLoadingScreenOpen](#) ()  
*Runs a callback after loading screen would have opened, if one was specified.*
- static [Callback BeforeLoadingScreenClose](#) ()  
*Runs a callback before loading screen would close, if one was opened.*
- static [Callback Before](#) (Phase [phase](#), Scene on)  
*Runs a callback before the specified phase, when processing the specified scene.*
- static [Callback After](#) (Phase [phase](#), Scene on)  
*Runs a callback after the specified phase.*
- static [Callback Before](#) (Phase [phase](#))  
*Runs a callback before the specified phase, when processing the specified scene.*
- static [Callback After](#) (Phase [phase](#))  
*Runs a callback after the specified phase.*

## Properties

- `Phase? phase` [get]  
*Specifies on what phase this callback should run at.*
- `When when` [get]  
*Specifies when to run the callback on a given Phase.*
- Action `action` [get]  
*The Action to run.*
- `Func< IEnumerator > enumerator` [get]  
*The IEnumerator coroutine to run.*
- `GlobalCoroutine coroutine` [get]  
*The GlobalCoroutine to run.*
- Scene `scene` [get]  
*Specifies the scene that this callback should run on.*

### 4.14.1 Detailed Description

Represents a callback that can be run on Phase change, or right before loading screen hide (or when it would, if it was enabled).

### 4.14.2 Member Enumeration Documentation

#### 4.14.2.1 When

enum `When`

Specifies when to run the callback on a given Phase.

Enumerator

Before	Run callback before any scene actions have started during a given Phase.
After	Run callback after all scene actions have run during a given Phase.

### 4.14.3 Member Function Documentation

#### 4.14.3.1 Before() [1/2]

```
static Callback Before (
    Phase phase ) [static]
```

Runs a callback before the specified phase, when processing the specified scene.

Phase will still have changed to the next though, but scene actions won't run until after callback.

#### 4.14.3.2 Before() [2/2]

```
static Callback Before (
    Phase phase,
    Scene on ) [static]
```

Runs a callback before the specified phase, when processing the specified scene.

Phase will still have changed to the next though, but scene actions won't run until after callback.

### 4.14.4 Property Documentation

#### 4.14.4.1 scene

```
Scene scene [get]
```

Specifies the scene that this callback should run on.

Specify `null` to run on all scenes.

## 4.15 CallbackUtility

An utility class that invokes callbacks (defined in interfaces based on `ISceneCallbacks`), and tracks performance and provides tools for optimizing and diagnosing bottlenecks in these callbacks.

### Classes

- class [FluentInvokeAPI](#)  
*An helper class to facilitate a fluent api.*

#### 4.15.1 Detailed Description

An utility class that invokes callbacks (defined in interfaces based on `ISceneCallbacks`), and tracks performance and provides tools for optimizing and diagnosing bottlenecks in these callbacks.

## 4.16 CanvasSortOrderUtility

An utility class to manage sort order on canvases.

### Static Public Member Functions

- static void **Remove** (Canvas canvas)  
*Removes this canvas from the managed list.*
- static void **PutOnTop** (this Canvas canvas)  
*Sets the sort order on this canvas to be on top of all other canvases managed by CanvasSortOrderUtility.*
- static void **PutAtBottom** (this Canvas canvas)  
*Sets the sort order on this canvas to be on bottom of all other canvases managed by CanvasSortOrderUtility.*
- static void **MakeSure** (this Canvas canvas, Canvas above=null, Canvas below=null)  
*Adds a constraint on the sort order of this Canvas based on one or two other canvases.*

### 4.16.1 Detailed Description

An utility class to manage sort order on canvases.

### 4.16.2 Member Function Documentation

#### 4.16.2.1 MakeSure()

```
static void MakeSure (
    this Canvas canvas,
    Canvas above = null,
    Canvas below = null ) [static]
```

Adds a constraint on the sort order of this Canvas based on one or two other canvases.

##### Parameters

<i>canvas</i>	The canvas to constrain.
<i>above</i>	Makes sure that this canvas is always above this one.
<i>below</i>	Makes sure that this canvas is always below this one.

See parameter comments for more info.

## 4.17 CoroutineUtility

An utility class that helps with running coroutines detached from MonoBehaviour.

### Classes

- class [Events](#)  
*Provides events for coroutine events.*

### Static Public Member Functions

- static [GlobalCoroutine Timer](#) (Action action, TimeSpan interval, [CallerFilePath] string callerFile="", [CallerLineNumber] int callerLine=0, [CallerMemberName] string callerName="")  
*Runs the action every interval.*
- static void **Run** (Action action, TimeSpan after, [CallerFilePath] string callerFile="", [CallerLineNumber] int callerLine=0, [CallerMemberName] string callerName="")  
*Runs the action after the specified time.*
- static void **Run** (Action action, float? after=null, bool nextFrame=false, Func< bool > when=null, [CallerFilePath] string callerFile="", [CallerLineNumber] int callerLine=0, [CallerMemberName] string callerName="")  
*Runs the action after the specified time.*
- static [GlobalCoroutine StartCoroutineGlobal](#) (this MonoBehaviour \_, IEnumerator coroutine, Action onComplete=null, string description="", [CallerFilePath] string callerFile="", [CallerLineNumber] int callerLine=0)  
*Runs the coroutine using CoroutineUtility, which means it won't be tied to a MonoBehaviour and will persist through scene close.*

- static [GlobalCoroutine](#) **StartCoroutine** (this IEnumerator coroutine, Action onComplete=null, string description="", [CallerFilePath] string callerFile="", [CallerLineNumber] int callerLine=0)
- static [GlobalCoroutine](#) **Chain** (params Func< IEnumerator >[] coroutines)  
*Runs the coroutines in sequence, wrapped in a single GlobalCoroutine.*
- static void **StopCoroutine** ([GlobalCoroutine](#) coroutine)  
*Stops the coroutine.*
- static void **StopAllCoroutines** ()  
*Stops all global coroutines.*
- static IEnumerator **WaitAll** (params IEnumerator[] coroutines)  
*Wait for all coroutines to complete.*
- static IEnumerator **WaitAll** (this IEnumerable< IEnumerator > coroutines, Func< bool > isCancelled=null, string debugText=null)  
*Wait for all coroutines to complete.*
- static IEnumerator **WaitAll** (params [GlobalCoroutine](#)[] coroutines)  
*Wait for all coroutines to complete.*
- static IEnumerator **WaitAll** (this [GlobalCoroutine](#)[] coroutines, Func< bool > isCancelled=null)  
*Wait for all coroutines to complete.*

### 4.17.1 Detailed Description

An utility class that helps with running coroutines detached from MonoBehaviour.

### 4.17.2 Member Function Documentation

#### 4.17.2.1 StartCoroutineGlobal()

```
static GlobalCoroutine StartCoroutineGlobal (
    this MonoBehaviour _,
    IEnumerator coroutine,
    Action onComplete = null,
    string description = "",
    [CallerFilePath] string callerFile = "",
    [CallerLineNumber] int callerLine = 0 ) [static]
```

Runs the coroutine using CoroutineUtility, which means it won't be tied to a MonoBehaviour and will persist through scene close.

You may yield return this method.

#### 4.17.2.2 StopAllCoroutines()

```
static void StopAllCoroutines ( ) [static]
```

Stops all global coroutines.

No effect if outside of play mode.

### 4.17.2.3 Timer()

```
static GlobalCoroutine Timer (
    Action action,
    TimeSpan interval,
    [CallerFilePath] string callerFile = "",
    [CallerLineNumber] int callerLine = 0,
    [CallerMemberName] string callerName = "" ) [static]
```

Runs the action every interval.

Automatically stops when Application.isPlaying changes.

## 4.18 CrossSceneReference

A reference to a variable that references another object in some other scene.

### 4.18.1 Detailed Description

A reference to a variable that references another object in some other scene.

## 4.19 CrossSceneReferenceUtility

An utility for saving and restoring cross-scene references.

### Static Public Member Functions

- static void **Initialize** ()  
*Initializes cross-scene references, if it is enabled in settings.*
- static void **Initialize** (bool? enabled=null)  
*Initializes cross-scene references, if it is enabled in settings.*
- static IEnumerable< [ResolvedCrossReference](#) > **GetResolvedReferences** ()  
*Gets all references for all scenes.*
- static IEnumerable< [ResolvedCrossReference](#) > **GetResolvedReferences** (scene scene)  
*Gets all references for this scene.*
- static IEnumerable< [ResolvedCrossReference](#) > **GetResolvedReferences** (GameObject obj)  
*Gets all references for this game object.*
- static IEnumerable< [ResolvedCrossReference](#) > **GetResolvedReferencesValue** (GameObject obj)  
*Gets all references for this game object.*
- static bool [CanSceneBeSaved](#) (scene scene)  
*Gets if the cross-scene references can be saved.*
- static bool **GetResolved** ([CrossSceneReference](#) reference, out [ResolvedCrossReference](#)? resolved)  
*Get the resolve result for a cross scene reference, if it has been resolved.*
- static [ResolvedCrossReference](#) **GetResolved** ([CrossSceneReference](#) reference)  
*Get the resolve result for a cross scene reference, if it has been resolved.*
- static void **ResolveAllScenes** ()

*Resolves all scenes.*

- static IEnumerable< [ResolvedCrossReference](#) > **ResolveScene** (scene scene)

*Resolves cross-scene references in the scene.*

- static void **ResetAllScenes** ()

*Resets all cross-scene references in all scenes.*

- static void **ResetScene** (scene scene)

*Resets all cross-scene references in scene.*

- static IEnumerable< [CrossSceneReference](#) > **FindCrossSceneReferences** (params scene[] scenes)

*Finds all cross-scene references in the scenes.*

### 4.19.1 Detailed Description

An utility for saving and restoring cross-scene references.

### 4.19.2 Member Function Documentation

#### 4.19.2.1 CanSceneBeSaved()

```
static bool CanSceneBeSaved (
    scene scene ) [static]
```

Gets if the cross-scene references can be saved.

This would be if status: SceneStatus.Restored and no resolve errors.

## 4.20 DefaultScenes

Provides access to the default ASM scenes.

Inherits ScriptableObject.

### Public Member Functions

- IEnumerable< [Scene](#) > **Enumerate** (bool listNulls=false)

*Enumerates all default scenes.*

## Properties

- [Scene splashASMScene](#) [get]  
*Gets the default ASM splash scene.*
- [Scene splashFadeScene](#) [get]  
*Gets the default fade splash scene.*
- [Scene fadeScene](#) [get]  
*Gets the default fade loading scene.*
- [Scene progressBarScene](#) [get]  
*Gets the default progress bar loading scene.*
- [Scene iconBounceScene](#) [get]  
*Gets the default icon bounce loading scene.*
- [Scene pressAnyKeyScene](#) [get]  
*Gets the default press any button loading scene.*
- [Scene quoteScene](#) [get]  
*Gets the default quote loading scene.*
- [Scene pauseScene](#) [get]  
*Gets the default pause scene.*
- [Scene inGameToolBarScene](#) [get]  
*Gets the default in-game-toolbar scene.*

### 4.20.1 Detailed Description

Provides access to the default ASM scenes.

### 4.20.2 Member Function Documentation

#### 4.20.2.1 Enumerate()

```
IEnumerable< Scene > Enumerate (
    bool listNulls = false )
```

Enumerates all default scenes.

#### Parameters

<i>listNulls</i>	Specifies whatever <code>null</code> will be returned for scenes that could not be found.
------------------	---

### 4.20.3 Property Documentation

#### 4.20.3.1 fadeScene

```
Scene fadeScene [get]
```

Gets the default fade loading scene.

May be `null` if scene has been removed, or is not imported.

#### 4.20.3.2 iconBounceScene

`Scene iconBounceScene [get]`

Gets the default icon bounce loading scene.

May be `null` if scene has been removed, or is not imported.

#### 4.20.3.3 inGameToolbarScene

`Scene inGameToolbarScene [get]`

Gets the default in-game-toolbar scene.

May be `null` if scene has been removed, or is not imported.

#### 4.20.3.4 pauseScene

`Scene pauseScene [get]`

Gets the default pause scene.

May be `null` if scene has been removed, or is not imported.

#### 4.20.3.5 pressAnyKeyScene

`Scene pressAnyKeyScene [get]`

Gets the default press any button loading scene.

May be `null` if scene has been removed, or is not imported.

#### 4.20.3.6 progressBarScene

`Scene progressBarScene [get]`

Gets the default progress bar loading scene.

May be `null` if scene has been removed, or is not imported.

#### 4.20.3.7 quoteScene

`Scene quoteScene [get]`

Gets the default quote loading scene.

May be `null` if scene has been removed, or is not imported.

#### 4.20.3.8 splashASMScene

`Scene splashASMScene [get]`

Gets the default ASM splash scene.

May be `null` if scene has been removed, or is not imported.

#### 4.20.3.9 splashFadeScene

`Scene splashFadeScene [get]`

Gets the default fade splash scene.

May be `null` if scene has been removed, or is not imported.

## 4.21 DependencyInjectionUtility

Contains utility methods for dependency injection.

### Classes

- interface `IInjectable`  
*Base interface for all injectable services.*

### 4.21.1 Detailed Description

Contains utility methods for dependency injection.

## 4.22 ProfileDependent< T >.Dict

A dictionary of type `Profile, T`.

Inheritance diagram for `ProfileDependent< T >.Dict`:

### 4.22.1 Detailed Description

A dictionary of type `Profile, T`.

## 4.23 DictionaryUtility

Contains utility functions for working with dictionaries.

### Static Public Member Functions

- static void **Add**< **TKey**, **TValue** > (this Dictionary< TKey, TValue > d, TKey key, TValue value)  
*Adds or sets the value of a key.*
- static void **Add**< **TKey**, **TList**, **TItem** > (this Dictionary< TKey, TList > d, TKey key, TItem item)  
*Adds the value to the list with the specified key. Creates list automatically if null and adds key if necessary.*
- static void **AddRange**< **TKey**, **TList**, **TItem** > (this Dictionary< TKey, TList > d, TKey key, IEnumerable< TItem > items)  
*Adds the values to the list with the specified key. Creates list automatically if null and adds key if necessary.*
- static void **AddRange**< **TKey**, **TList**, **TItem** > (this Dictionary< TKey, TList > d, TKey key, params TItem[] items)  
*Adds the values to the list with the specified key. Creates list automatically if null and adds key if necessary.*
- static void **Remove**< **TKey**, **TList**, **TItem** > (this Dictionary< TKey, TList > d, TKey key, TItem value)  
*Removes the value to the list with the specified key.*
- static TValue **GetValue**< **TKey**, **TValue** > (this Dictionary< TKey, TValue > d, TKey key, TValue default↵ Value=default)  
*Gets the value of the specified key, returns default if it does not exist.*

### 4.23.1 Detailed Description

Contains utility functions for working with dictionaries.

## 4.24 DynamicCollection

Represents a collection that can take a path and then gather all scenes within, guaranteeing that they are all added to build, including non-imported and blacklisted scenes.

Inheritance diagram for DynamicCollection:

### Public Member Functions

- bool **Contains** (string [path](#))  
*Gets if the specified SceneAsset path is tracked by this dynamic collection.*

## Properties

- string **id** [get]  
*Gets the id of this collection.*
- [Profile](#) **profile** [get]  
*Finds the profile associated with this dynamic collection.*
- string **path** [get, set]  
*Specifies the path that this dynamic collection will gather scenes from.*
- string **title** [get, set]  
*Gets the title of this collection.*
- string **description** [get, set]  
*Gets the description of this collection.*
- IEnumerable< string > **scenePaths** [get]  
*Gets the scenes of this collection.*
- [Scene](#) **this[int index]** [get]  
*Gets the scene at the specified index.*
- int **count** [get]  
*Gets the scene count of this collection.*

## Properties inherited from [ISceneCollection](#)

### 4.24.1 Detailed Description

Represents a collection that can take a path and then gather all scenes within, guaranteeing that they are all added to build, including non-imported and blacklisted scenes.

Represents a dynamic scene collection.

## 4.25 CoroutineUtility.Events

Provides events for coroutine events.

### Public Member Functions

- delegate void **CoroutineEvent** ([GlobalCoroutine](#) coroutine)

#### Parameters

coroutine	<i>The coroutine that this event was called for.</i>
-----------	--

- delegate object [CoroutineFrameStartEvent](#) ([GlobalCoroutine](#) coroutine, object data, int level, object parent↔ UserData, bool isPause)
- delegate void [CoroutineFrameEndEvent](#) ([GlobalCoroutine](#) coroutine, object userData)

### Static Public Attributes

- static [CoroutineEvent](#) **onCreated**

Occurs when created. Note that *GlobalCoroutine* is pooled, the same object instance will be used multiple times, and this event is called when the pooled instance is 'constructed', meaning this event will be called multiple times for the same object instance.

- static [CoroutineEvent](#) **onDestroyed**

Occurs when a *GlobalCoroutine* is 'destroyed'. Note that *GlobalCoroutine* is pooled, the same object instance will be used multiple times, and this event is called when the pooled instance is 'destroyed', meaning this event will be called multiple times for the same object instance.

- static [CoroutineEvent](#) **onCoroutineStarted**

Occurs when a *GlobalCoroutine* is started.

- static [CoroutineEvent](#) **onCoroutineEnded**

Occurs when a *GlobalCoroutine* is ended.

- static [CoroutineFrameStartEvent](#) **onSubroutineStart**

Occurs before a subroutine in an executing *GlobalCoroutine* is started.

- static [CoroutineFrameEndEvent](#) **onSubroutineEnd**

Occurs when a subroutine in an executing *GlobalCoroutine* has ended.

## Properties

- static bool **enableEvents** [get]

Enables or disables events. Setter not available, and getter always returns false, in build. Default is *false*.

## 4.25.1 Detailed Description

Provides events for coroutine events.

## 4.25.2 Member Function Documentation

### 4.25.2.1 CoroutineFrameEndEvent()

```
delegate void CoroutineFrameEndEvent (
    GlobalCoroutine coroutine,
    object userData )
```

#### Parameters

<i>coroutine</i>	The coroutine that this event was called for.
<i>userData</i>	The userdata that was passed to onSubroutineStart.

### 4.25.2.2 CoroutineFrameStartEvent()

```
delegate object CoroutineFrameStartEvent (
    GlobalCoroutine coroutine,
    object data,
    int level,
    object parentUserData,
    bool isPause )
```

## Parameters

<i>coroutine</i>	The coroutine that this event was called for.
<i>data</i>	The object returned from IEnumerator.Current.
<i>level</i>	The level, or depth, of the current subroutine.
<i>parentUserData</i>	The userdata of the subroutine above this one, depth-wise.
<i>isPause</i>	GlobalCoroutine.Pause is reported as a subroutine, this is true when that is the case.

### 4.25.3 Member Data Documentation

#### 4.25.3.1 onSubroutineStart

`CoroutineFrameStartEvent onSubroutineStart [static]`

Occurs before a subroutine in an executing GlobalCoroutine is started.

A user object can be returned, which is then passed to onSubroutineEnd.

## 4.26 FallbackSceneUtility

An utility class that manages the default scene, called '[AdvancedSceneManager](#)'.

### Static Public Member Functions

- static bool **IsFallbackScene** (scene scene)  
*Gets whatever the specified scene is the default scene.*

#### 4.26.1 Detailed Description

An utility class that manages the default scene, called '[AdvancedSceneManager](#)'.

The default scene allows us to more easily close all scenes when we need to, since unity requires at least one scene to be open at any time.

## 4.27 CallbackUtility.FluentInvokeAPI< T >

An helper class to facilitate a fluent api.

## Public Member Functions

- [FluentInvokeAPI](#)< T > [WithCallback](#) (Callback callback)  
*Specify a callback, this should point to the interface method which provides a IEnumerator.*
- [FluentInvokeAPI](#)< T > [WithParam](#) (object param)  
*Specify a parameter to use when invoking the callback.*
- IEnumerator [On](#) ([SceneCollection](#) collection, params [Scene](#)[] additionalScenes)  
*Specify the collection scenes to run this callback on and start execution.*
- IEnumerator [OnAllOpenScenes](#) ()  
*Specify the collection scenes to run this callback on and start execution..*
- IEnumerator [On](#) (params [Scene](#)[] scenes)  
*Specify the scenes to run this callback on and start execution.*
- IEnumerator [On](#) (params ScriptableObject[] scriptableObjects)  
*Specify the scenes to run this callback on and start execution.*

## Properties

- bool [hasDefaultCallback](#) [get]  
*Gets whatever T has a default callback. All callbacks inheriting from ISceneCallbacks should have one.*

### 4.27.1 Detailed Description

An helper class to facilitate a fluent api.

Usage: Invoke<T>

### 4.27.2 Member Function Documentation

#### 4.27.2.1 WithCallback()

```
FluentInvokeAPI< T > WithCallback (
    Callback callback )
```

Specify a callback, this should point to the interface method which provides a IEnumerator.

This is not needed for callback interfaces inheriting from ISceneCallbacks.

## 4.28 GlobalCoroutine

Represents a IEnumerator coroutine started using CoroutineUtility.

Inherits CustomYieldInstruction.

### Public Member Functions

- void **Pause** ()  
*Pauses the coroutine. Make sure to not use this from within a coroutine, unless you also make sure to unpause it from outside. No effect if already paused.*
- void **Resume** ()  
*Resumes a paused coroutine. No effect if not paused.*
- void **Stop** ()  
*Stops the coroutine.*
- override string **ToString** ()  
*>*

### Public Attributes

- MethodBase **method**  
*Gets the caller info of this coroutine.*

### Properties

- Action **onComplete** [get]  
*The callback that is executed when coroutine is finished.*
- bool **isPaused** [get]  
*Gets whatever this coroutine is paused.*
- bool **isComplete** [get]  
*Gets whatever this coroutine is completed.*
- bool **isRunning** [get]  
*Gets whatever this coroutine is currently running. This will still return true when paused.*
- bool **wasCancelled** [get]  
*Gets whatever this coroutine was cancelled.*
- string **description** [get, set]  
*Gets the user defined message that was associated with this coroutine.*
- override bool **keepWaiting** [get]  
*CustomYieldInstruction.keepWaiting, this is how unity knows if this coroutine is done or not.*

#### 4.28.1 Detailed Description

Represents a IEnumerator coroutine started using CoroutineUtility.

## 4.29 GuidReference

Represents a persistent reference to the GameObject that this is attached to, see also GuidReferenceUtility .

Inherits MonoBehaviour.

#### 4.29.1 Detailed Description

Represents a persistent reference to the GameObject that this is attached to, see also GuidReferenceUtility .

## 4.30 GuidReferenceUtility

An utility for referencing objects globally.

### Static Public Member Functions

- static bool **IsRegistered** ([GuidReference](#) reference)  
*Gets if reference exists.*
- static bool **HasReference** (string id)  
*Gets if reference exists.*
- static bool **TryFind** (string id, out [GuidReference](#) obj)  
*Tries to find the reference.*
- static [GuidReference](#) **Find** (string id)  
*Finds a reference if it exists.*
- static string **GetOrAddPersistent** (GameObject obj)  
*Adds a persistent reference to this GameObject.*
- static string **GenerateID** ()  
*Generates an id.*

### 4.30.1 Detailed Description

An utility for referencing objects globally.

### 4.30.2 Member Function Documentation

#### 4.30.2.1 GenerateID()

```
static string GenerateID ( ) [static]
```

Generates an id.

Uses <https://blog.codinghorror.com/equipping-our-ascii-armor>.

#### 4.30.2.2 GetOrAddPersistent()

```
static string GetOrAddPersistent (
    GameObject obj ) [static]
```

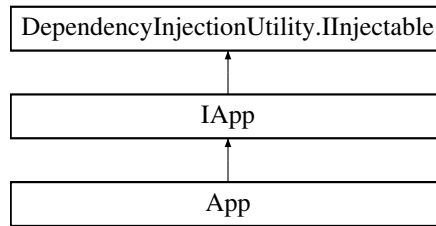

Adds a persistent reference to this GameObject.

Can only add in editor, returns `null` otherwise.

## 4.31 IApp

Inheritance diagram for IApp:

### 4.31.1 Detailed Description

## 4.32 IAssetsProvider

Inheritance diagram for IAssetsProvider:

### 4.32.1 Detailed Description

## 4.33 ICollectionClose

Inheritance diagram for ICollectionClose:

### Public Member Functions

- void **OnCollectionClose** ([SceneCollection](#) collection)

### 4.33.1 Detailed Description

Callback for when a scene in a collection that a MonoBehaviour is contained within is closed.

Called after loading screen has opened, if one is defined, or else just before collection is closed.

See also: [ICollectionCloseAsync](#).

## 4.34 ICollectionCloseAsync

Inheritance diagram for ICollectionCloseAsync:

### Public Member Functions

- IEnumerator **OnCollectionClose** ([SceneCollection](#) collection)

### 4.34.1 Detailed Description

Scene operation will wait for coroutine callback before continuing.

## 4.35 ICollectionExtraDataCallbacks

Callbacks for a ScriptableObject that has been set as extra data for a collection.

Inheritance diagram for ICollectionExtraDataCallbacks:

### Additional Inherited Members

#### Public Member Functions inherited from [ICollectionOpenAsync](#)

- IEnumerator **OnCollectionOpen** ([SceneCollection](#) collection)

#### Public Member Functions inherited from [ICollectionCloseAsync](#)

- IEnumerator **OnCollectionClose** ([SceneCollection](#) collection)

### 4.35.1 Detailed Description

Callbacks for a ScriptableObject that has been set as extra data for a collection.

See also: ICollectionExtraDataCallbacksAsync.

## 4.36 ICollectionExtraDataCallbacksAsync

Callbacks for a ScriptableObject that has been set as extra data for a collection.

Inheritance diagram for ICollectionExtraDataCallbacksAsync:

### Additional Inherited Members

### Public Member Functions inherited from ICollectionOpenAsync

- IEnumerator **OnCollectionOpen** ([SceneCollection](#) collection)

### Public Member Functions inherited from ICollectionCloseAsync

- IEnumerator **OnCollectionClose** ([SceneCollection](#) collection)

### 4.36.1 Detailed Description

Callbacks for a ScriptableObject that has been set as extra data for a collection.

Scene operation will wait for coroutine callback before continuing.

## 4.37 ICollectionOpen

Inheritance diagram for ICollectionOpen:

### Public Member Functions

- void **OnCollectionOpen** ([SceneCollection](#) collection)

#### 4.37.1 Detailed Description

Callback for when a scene in a collection that a MonoBehaviour is contained within is opened.

Called before loading screen is hidden, if one is defined, or else just when collection has opened.

See also: [ICollectionOpenAsync](#).

## 4.38 ICollectionOpenAsync

Inheritance diagram for [ICollectionOpenAsync](#):

### Public Member Functions

- [IEnumerator](#) **OnCollectionOpen** ([SceneCollection](#) collection)

#### 4.38.1 Detailed Description

Scene operation will wait for coroutine callback before continuing.

## 4.39 Scene.IMethods.IEvent

Inheritance diagram for `Scene.IMethods.IEvent`:

**Public Member Functions**

- void **\_Open** ()  
*Event method. Its meant for UnityEngine.Events.UnityEvent.*
- void **\_ToggleOpen** ()
- void **\_Close** ()
- void **\_Preload** ()
- void **\_FinishPreload** ()
- void **\_DiscardPreload** ()
- void **\_OpenWithLoadingScreen** (Scene loadingScene)
- void **\_SetActive** ()
- void **\_OpenAndActivate** ()

**4.39.1 Detailed Description**

Specifies methods to be used in UnityEvent, using the scene itself.

**4.40 Scene.IMethods\_Target.IEvent**

Inheritance diagram for Scene.IMethods\_Target.IEvent:

**Public Member Functions**

- void **\_Open** (Scene scene)
- void **\_ToggleOpen** (Scene scene)
- void **\_Close** (Scene scene)
- void **\_Preload** (Scene scene)
- void **\_FinishPreload** (Scene scene)
- void **\_DiscardPreload** (Scene scene)
- void **\_SetActive** (Scene scene)
- void **\_OpenAndActivate** (Scene scene)

**4.40.1 Detailed Description**

Specifies methods to be used in UnityEvent, when not using scene itself.

## 4.41 SceneCollection.IMethods.IEvent

Inheritance diagram for SceneCollection.IMethods.IEvent:

### Public Member Functions

- void **\_Open** (bool openAll=false)
- void **\_OpenAdditive** (bool openAll=false)
- void **\_ToggleOpen** ()
- void **\_ToggleOpen** (bool openAll=false)
- void **\_Close** ()

### 4.41.1 Detailed Description

Specifies methods to be used in UnityEvent, using the collection itself.

## 4.42 SceneCollection.IMethods\_Target.IEvent

Inheritance diagram for SceneCollection.IMethods\_Target.IEvent:

### Public Member Functions

- void **\_Open** ([SceneCollection](#) collection)
- void **\_OpenAdditive** ([SceneCollection](#) collection)
- void **\_ToggleOpen** ([SceneCollection](#) collection)
- void **\_Close** ([SceneCollection](#) collection)

### 4.42.1 Detailed Description

Specifies methods to be used in UnityEvent, when not using collection itself.

## 4.43 IFadeLoadingScreen

Used to pass arguments from LoadingScreenUtility.FadeIn>LoadingScreen, float, Color?

### Properties

- float **fadeDuration** [get, set]  
*Specifies the fade duration.*
- Color **color** [get, set]  
*Specifies the color of the fade.*

### 4.43.1 Detailed Description

Used to pass arguments from LoadingScreenUtility.FadeIn>LoadingScreen, float, Color?

## 4.44 DependencyInjectionUtility.IInjectable

Base interface for all injectable services.

Inheritance diagram for DependencyInjectionUtility.IInjectable:

### 4.44.1 Detailed Description

Base interface for all injectable services.

Injectable classes implementing an interface based on IInjectable is automatically registered in DependencyInjectionUtility static constructor.

## 4.45 ILockable

Specifies a object that can be locked, using LockUtility.

Inheritance diagram for ILockable:

### 4.45.1 Detailed Description

Specifies a object that can be locked, using LockUtility.

Available, but no effect in build.

## 4.46 Scene.IMethods

Inheritance diagram for Scene.IMethods:

### Classes

- interface [IEvent](#)

### Public Member Functions

- [SceneOperation Open](#) ()  
*Opens the scene.*
- [SceneOperation ToggleOpen](#) ()  
*Toggles this scene open or closed.*
- [SceneOperation Close](#) ()  
*Closes the scene.*
- [SceneOperation Preload](#) (Action onPreloaded=null)  
*Preloads the scene, to be displayed at a later time. See also: FinishPreload, DiscardPreload.*
- [SceneOperation FinishPreload](#) ()  
*Finishes preloading the scene, displaying it.*
- [SceneOperation DiscardPreload](#) ()  
*Discards the scene, if preloaded.*
- [SceneOperation OpenWithLoadingScreen](#) ([Scene](#) loadingScene)  
*Opens the scene while a loading screen is open.*
- [SceneOperation OpenAndActivate](#) ()  
*Opens the scene and sets it as active.*
- void [SetActive](#) ()  
*Sets the scene as active in heirarchy.*

### 4.46.1 Detailed Description

Specified methods to be used programmatically, on the scene itself.

## 4.46.2 Member Function Documentation

### 4.46.2.1 Close()

`SceneOperation Close ( )`

Closes the scene.

No effect if scene is already closed.

Implemented in [ProfileDependentScene](#), and [Scene](#).

### 4.46.2.2 FinishPreload()

`SceneOperation FinishPreload ( )`

Finishes preloading the scene, displaying it.

Scene must be preloaded beforehand.

Implemented in [ProfileDependentScene](#), and [Scene](#).

### 4.46.2.3 Open()

`SceneOperation Open ( )`

Opens the scene.

No effect if scene is already open.

Implemented in [ProfileDependentScene](#), and [Scene](#).

### 4.46.2.4 Preload()

`SceneOperation Preload (`  
     *Action onPreloaded = null* `)`

Preloads the scene, to be displayed at a later time. See also: FinishPreload, DiscardPreload.

Scene must be closed beforehand.

Implemented in [ProfileDependentScene](#), and [Scene](#).

## 4.47 SceneCollection.IMethods

Inheritance diagram for SceneCollection.IMethods:

## Classes

- interface [IEvent](#)

## Public Member Functions

- [SceneOperation Open](#) (bool openAll=false)  
*Opens this collection.*
- [SceneOperation OpenAdditive](#) (bool openAll=false)  
*Opens this collection as additive.*
- [SceneOperation ToggleOpen](#) (bool openAll=false)  
*Toggles this collection open or closed.*
- [SceneOperation Close](#) ()  
*Closes this collection.*

### 4.47.1 Detailed Description

Specified methods to be used programmatically, on the collection itself.

### 4.47.2 Member Function Documentation

#### 4.47.2.1 Close()

```
SceneOperation Close ( )
```

Closes this collection.

No effect if collection is already closed. Note that "additive collections" are not actually opened, only its scenes are.

Implemented in [SceneCollection](#), and [ProfileDependentCollection](#).

#### 4.47.2.2 Open()

```
SceneOperation Open (
    bool openAll = false )
```

Opens this collection.

##### Parameters

<i>openAll</i>	Specifies whatever scenes flagged to not open with collection, should.
----------------	--

Reopens all non-persistent scenes.

Implemented in [SceneCollection](#), and [ProfileDependentCollection](#).

### 4.47.2.3 OpenAdditive()

```
SceneOperation OpenAdditive (
    bool openAll = false )
```

Opens this collection as additive.

#### Parameters

<i>openAll</i>	Specifies whatever scenes flagged to not open with collection, should.
----------------	--

Additive collections are not "opened", all scenes within are merely opened like normal scenes. Mostly intended for convenience.

Implemented in [SceneCollection](#), and [ProfileDependentCollection](#).

### 4.47.2.4 ToggleOpen()

```
SceneOperation ToggleOpen (
    bool openAll = false )
```

Toggles this collection open or closed.

#### Parameters

<i>openState</i>	Specifies whatever you have a preferred state to toggle to, this means collection will not be closed if <code>true</code> is passed. This can be used to ensure collection is open, without having an explicit check beforehand. The inverse is also the case for <code>false</code> .
<i>openAll</i>	Specifies whatever scenes flagged to not open with collection, should.

Implemented in [SceneCollection](#), and [ProfileDependentCollection](#).

## 4.48 Scene.IMethods\_Target

Inheritance diagram for Scene.IMethods\_Target:

#### Classes

- interface [IEvent](#)

## Public Member Functions

- [SceneOperation Open](#) ([Scene](#) scene)  
*Opens the specified scene.*
- [SceneOperation ToggleOpen](#) ([Scene](#) scene)  
*Toggles the open state of the specified scene.*
- [SceneOperation Close](#) ([Scene](#) scene)  
*Closes the specified scene.*
- [SceneOperation Preload](#) ([Scene](#) scene, Action onPreloaded=null)  
*Preloads the specified scene, to be displayed at a later time. See also: [FinishPreload\(Scene\)](#), [DiscardPreload\(←Scene\)](#).*
- [SceneOperation FinishPreload](#) ([Scene](#) scene)  
*Finishes preloading the specified scene, displaying it.*
- [SceneOperation DiscardPreload](#) ([Scene](#) scene)  
*Discards the specified scene, if preloaded.*
- [SceneOperation OpenWithLoadingScreen](#) ([Scene](#) scene, [Scene](#) loadingScene)  
*Opens the specified scene while a loading screen is open.*
- [SceneOperation OpenAndActivate](#) ([Scene](#) scene)  
*Opens the scene and activates it.*
- void [SetActive](#) ([Scene](#) scene)  
*Sets the specified scene as active in heirarchy.*

### 4.48.1 Detailed Description

Specifies methods to be used programmatically, using scene as first parameter.

### 4.48.2 Member Function Documentation

#### 4.48.2.1 Close()

```
SceneOperation Close (
    Scene scene )
```

Closes the specified scene.

Already closed scenes not affected.

Implemented in [ASMSceneHelper](#).

#### 4.48.2.2 FinishPreload()

```
SceneOperation FinishPreload (
    Scene scene )
```

Finishes preloading the specified scene, displaying it.

Scene must be preloaded beforehand.

Implemented in [ASMSceneHelper](#).

#### 4.48.2.3 Open()

```
SceneOperation Open (
    Scene scene )
```

Opens the specified scene.

Already open scenes not affected.

Implemented in [ASMSceneHelper](#).

#### 4.48.2.4 Preload()

```
SceneOperation Preload (
    Scene scene,
    Action onPreloaded = null )
```

Preloads the specified scene, to be displayed at a later time. See also: [FinishPreload\(Scene\)](#), [DiscardPreload\(Scene\)](#).

Scene must be closed beforehand.

Implemented in [ASMSceneHelper](#).

### 4.49 SceneCollection.IMethods\_Target

Inheritance diagram for SceneCollection.IMethods\_Target:

#### Classes

- interface [IEvent](#)

#### Public Member Functions

- [SceneOperation Open](#) ([SceneCollection](#) collection, bool openAll=false)
- [SceneOperation OpenAdditive](#) ([SceneCollection](#) collection, bool openAll=false)
- [SceneOperation ToggleOpen](#) ([SceneCollection](#) collection, bool openAll=false)
- [SceneOperation Close](#) ([SceneCollection](#) collection)

#### 4.49.1 Detailed Description

Specifies methods to be used programmatically, using collection as first parameter.

## 4.50 InitializeInEditorAttribute

Initializes a class in editor on recompile.

Inherits Attribute.

### 4.50.1 Detailed Description

Initializes a class in editor on recompile.

Available in build, but no effect.

## 4.51 InitializeInEditorMethodAttribute

Initializes a class in editor on recompile.

Inherits Attribute.

### 4.51.1 Detailed Description

Initializes a class in editor on recompile.

Available in build, but no effect.

## 4.52 InputBinding

Represents a input binding for InputSystem. Available even when InputSystem is uninstalled.

### Properties

- List< [InputButton](#) > **buttons** [get]  
*Specifies the buttons.*
- bool **openCollectionAsAdditive** [get, set]  
*Specifies whatever collection should be opened as a collection.*
- [InputBindingInteractionType](#) **interactionType** [get, set]  
*Specifies the interaction type.*

### 4.52.1 Detailed Description

Represents a input binding for InputSystem. Available even when InputSystem is uninstalled.

## 4.53 InputButton

Specifies a input binding for use with InputSystem.

### Public Attributes

- string **name**  
*Specifies the name of this binding.*
- string **path**  
*Specifies the path of this binding.*

### Properties

- readonly bool **isValid** [get]  
*Gets if this binding is valid.*

### 4.53.1 Detailed Description

Specifies a input binding for use with InputSystem.

### 4.53.2 Member Data Documentation

#### 4.53.2.1 path

`string path`

Specifies the path of this binding.

This would be `UnityEngine.InputSystem.InputBinding.path`.

## 4.54 IProfileManager

Manages the current profile.

Inheritance diagram for IProfileManager:

### Properties

- **Profile current** [get]

### 4.54.1 Detailed Description

Manages the current profile.

## 4.55 IProjectSettings

Inheritance diagram for IProjectSettings:

### Public Member Functions

- void **Save** ()
- void **SaveNow** ()

### Properties

- bool **allowCollectionLocking** [get, set]
- bool **allowExcludingCollectionsFromBuild** [get, set]
- bool **allowSceneLocking** [get, set]
- string **assetPath** [get, set]
- Profile **buildProfile** [get]
- Color **buildUnitySplashScreenColor** [get]
- bool **checkForDuplicateSceneOperations** [get, set]
- ASMSettings.CustomData **customData** [get]
- Profile **defaultProfile** [get, set]
- bool **enableCrossSceneReferences** [get, set]
- Scene **fadeScene** [get, set]
- Profile **forceProfile** [get, set]
- bool **preventSpammingEventMethods** [get, set]
- bool **reverseUnloadOrderOnCollectionClose** [get, set]
- SceneImportOption **sceneImportOption** [get, set]
- float **spamCheckCooldown** [get, set]

### 4.55.1 Detailed Description

## 4.56 IQueueable

Represents a queueable item.

Inheritance diagram for IQueueable:

## Public Member Functions

- void **OnTurn** (Action onComplete)  
*Called when it is this queueables turn.*
- void **OnCancel** ()  
*Called when queueable is cancelled.*
- bool **CanQueue** ()  
*Called to make sure the item can actually be queued.*

### 4.56.1 Detailed Description

Represents a queueable item.

See also QueueUtility<T>.

### 4.56.2 Member Function Documentation

#### 4.56.2.1 OnTurn()

```
void OnTurn (
    Action onComplete )
```

Called when it is this queueables turn.

#### Parameters

<i>onComplete</i>	Must be called when operation is done, otherwise queue will be stuck.
-------------------	---

## 4.57 IRuntime

Inheritance diagram for IRuntime:

## Additional Inherited Members

### Public Member Functions inherited from ISceneManager

- void **AddSceneLoader**< T > ()

- **SceneOperation Close** (IEnumerable< [Scene](#) > scenes)
- **SceneOperation Close** (params [Scene](#)[] scenes)
- **SceneOperation Close** ([Scene](#) scene)
- **SceneOperation Close** ([SceneCollection](#) collection)
- **SceneOperation CloseAll** (bool exceptLoadingScreens=true, bool exceptUnimported=true, params [Scene](#)[] except)
- **SceneOperation DiscardPreload** ()
- **SceneOperation DiscardPreload** ([Scene](#) scene)
- **SceneOperation FinishPreload** ()
- **SceneOperation FinishPreload** ([Scene](#) scene)
- **SceneLoader GetLoaderForScene** ([Scene](#) scene)
- **SceneState GetState** ([Scene](#) scene)
- IEnumerable< [SceneLoader](#) > **GetToggleableSceneLoaders** ()
- bool **IsTracked** ([Scene](#) scene)
- bool **IsTracked** ([SceneCollection](#) collection)
- **SceneOperation Open** (IEnumerable< [Scene](#) > scenes)
- **SceneOperation Open** (params [Scene](#)[] scenes)
- **SceneOperation Open** ([Scene](#) scene)
- **SceneOperation Open** ([SceneCollection](#) collection, bool openAll=false)
- **SceneOperation OpenAdditive** (IEnumerable< [SceneCollection](#) > collections, [SceneCollection](#) active↵Collection=null, [Scene](#) loadingScene=null)
- **SceneOperation OpenAdditive** ([SceneCollection](#) collection, bool openAll=false)
- **SceneOperation OpenAndActivate** ([Scene](#) scene)
- **SceneOperation OpenWithLoadingScreen** (IEnumerable< [Scene](#) > scene, [Scene](#) loadingScreen)
- **SceneOperation OpenWithLoadingScreen** ([Scene](#) scene, [Scene](#) loadingScreen)
- **SceneOperation Preload** ([Scene](#) scene, Action onPreloaded=null)
- void **RemoveSceneLoader**< [T](#) > ()
- void **SetActive** ([Scene](#) scene)
- **SceneOperation ToggleOpen** ([Scene](#) scene)
- **SceneOperation ToggleOpen** ([SceneCollection](#) collection, bool openAll=false)
- void **Track** ([Scene](#) scene)
- void **Track** ([Scene](#) scene, UnityEngine.SceneManagement.Scene unityScene)
- void **Track** ([SceneCollection](#) collection, bool isAdditive=false)
- bool **Untrack** ([Scene](#) scene)
- void **Untrack** ([SceneCollection](#) collection, bool isAdditive=false)
- void **UntrackCollections** ()
- void **UntrackScenes** ()

## Properties inherited from [ISceneManager](#)

- [Scene](#) **activeScene** [get]
- **SceneOperation** **currentOperation** [get]
- [Scene](#) **dontDestroyOnLoad** [get]
- bool **isBusy** [get]
- IEnumerable< [SceneCollection](#) > **openAdditiveCollections** [get]
- [SceneCollection](#) **openCollection** [get]
- IEnumerable< [Scene](#) > **openScenes** [get]
- [Scene](#) **preloadedScene** [get]
- IEnumerable< **SceneOperation** > **queuedOperations** [get]
- IEnumerable< **SceneOperation** > **runningOperations** [get]

## Events inherited from ISceneManager

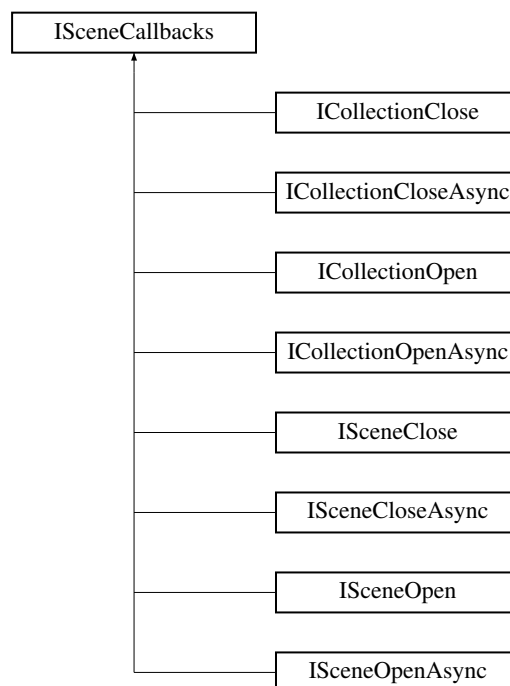

- Action< [SceneCollection](#) > **collectionClosed**
- Action< [SceneCollection](#) > **collectionOpened**
- Action< [Scene](#) > **sceneClosed**
- Action< [Scene](#) > **sceneOpened**
- Action< [Scene](#) > **scenePreloaded**
- Action< [Scene](#) > **scenePreloadFinished**
- Action **startedWorking**
- Action **stoppedWorking**

### 4.57.1 Detailed Description

## 4.58 ISceneCallbacks

Base interface for ISceneOpen, ISceneClose, ICollectionOpen, ICollectionClose. Does nothing on its own, used by CallbackUtility.

Inheritance diagram for ISceneCallbacks:

### 4.58.1 Detailed Description

Base interface for ISceneOpen, ISceneClose, ICollectionOpen, ICollectionClose. Does nothing on its own, used by CallbackUtility.

## 4.59 ISceneClose

Callback for when the scene that a MonoBehaviour is contained within is closed.

Inheritance diagram for ISceneClose:

### Public Member Functions

- void **OnSceneClose** ()

### 4.59.1 Detailed Description

Callback for when the scene that a MonoBehaviour is contained within is closed.

See also: ISceneCloseAsync.

## 4.60 ISceneCloseAsync

Inheritance diagram for ISceneCloseAsync:

### Public Member Functions

- IEnumerator **OnSceneClose** ()

### 4.60.1 Detailed Description

Scene operation will wait for coroutine callback before continuing.

## 4.61 ISceneCollection

Represents the core variables of what makes up a scene collection.

Inheritance diagram for ISceneCollection:

### Properties

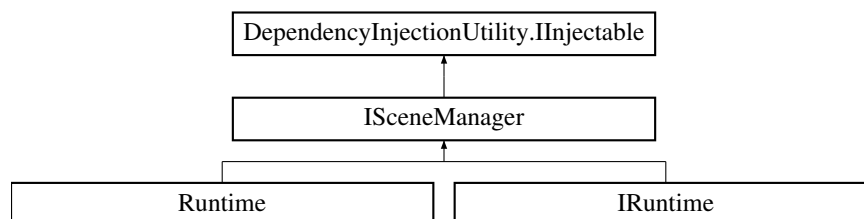

- `IEnumerable< Scene > scenes` [get]  
*Gets the scenes of this collection.*
- `IEnumerable< string > scenePaths` [get]  
*Gets the scenes of this collection.*
- `string title` [get]  
*Gets the title of this collection.*
- `string description` [get]  
*Gets the description of this collection.*
- `int count` [get]  
*Gets the scene count of this collection.*
- `string id` [get]  
*Gets the id of this collection.*
- `Scene this[int index]` [get]  
*Gets the scene at the specified index.*

### 4.61.1 Detailed Description

Represents the core variables of what makes up a scene collection.

## 4.62 ISceneManager

Inheritance diagram for ISceneManager:

## Public Member Functions

- void **AddSceneLoader**< T > ()
- **SceneOperation Close** (IEnumerable< [Scene](#) > scenes)
- **SceneOperation Close** (params [Scene](#)[] scenes)
- **SceneOperation Close** ([Scene](#) scene)
- **SceneOperation Close** ([SceneCollection](#) collection)
- **SceneOperation CloseAll** (bool exceptLoadingScreens=true, bool exceptUnimported=true, params [Scene](#)[] except)
- **SceneOperation DiscardPreload** ()
- **SceneOperation DiscardPreload** ([Scene](#) scene)
- **SceneOperation FinishPreload** ()
- **SceneOperation FinishPreload** ([Scene](#) scene)
- **SceneLoader GetLoaderForScene** ([Scene](#) scene)
- **SceneState GetState** ([Scene](#) scene)
- IEnumerable< [SceneLoader](#) > **GetToggleableSceneLoaders** ()
- bool **IsTracked** ([Scene](#) scene)
- bool **IsTracked** ([SceneCollection](#) collection)
- **SceneOperation Open** (IEnumerable< [Scene](#) > scenes)
- **SceneOperation Open** (params [Scene](#)[] scenes)
- **SceneOperation Open** ([Scene](#) scene)
- **SceneOperation Open** ([SceneCollection](#) collection, bool openAll=false)
- **SceneOperation OpenAdditive** (IEnumerable< [SceneCollection](#) > collections, [SceneCollection](#) active↔ Collection=null, [Scene](#) loadingScene=null)
- **SceneOperation OpenAdditive** ([SceneCollection](#) collection, bool openAll=false)
- **SceneOperation OpenAndActivate** ([Scene](#) scene)
- **SceneOperation OpenWithLoadingScreen** (IEnumerable< [Scene](#) > scene, [Scene](#) loadingScreen)
- **SceneOperation OpenWithLoadingScreen** ([Scene](#) scene, [Scene](#) loadingScreen)
- **SceneOperation Preload** ([Scene](#) scene, Action onPreloaded=null)
- void **RemoveSceneLoader**< T > ()
- void **SetActive** ([Scene](#) scene)
- **SceneOperation ToggleOpen** ([Scene](#) scene)
- **SceneOperation ToggleOpen** ([SceneCollection](#) collection, bool openAll=false)
- void **Track** ([Scene](#) scene)
- void **Track** ([Scene](#) scene, UnityEngine.SceneManagement.Scene unityScene)
- void **Track** ([SceneCollection](#) collection, bool isAdditive=false)
- bool **Untrack** ([Scene](#) scene)
- void **Untrack** ([SceneCollection](#) collection, bool isAdditive=false)
- void **UntrackCollections** ()
- void **UntrackScenes** ()

## Properties

- [Scene](#) **activeScene** [get]
- **SceneOperation** **currentOperation** [get]
- [Scene](#) **dontDestroyOnLoad** [get]
- bool **isBusy** [get]
- IEnumerable< [SceneCollection](#) > **openAdditiveCollections** [get]
- [SceneCollection](#) **openCollection** [get]
- IEnumerable< [Scene](#) > **openScenes** [get]
- [Scene](#) **preloadedScene** [get]
- IEnumerable< **SceneOperation** > **queuedOperations** [get]
- IEnumerable< **SceneOperation** > **runningOperations** [get]

## Events

- Action< [SceneCollection](#) > **collectionClosed**
- Action< [SceneCollection](#) > **collectionOpened**
- Action< [Scene](#) > **sceneClosed**
- Action< [Scene](#) > **sceneOpened**
- Action< [Scene](#) > **scenePreloaded**
- Action< [Scene](#) > **scenePreloadFinished**
- Action **startedWorking**
- Action **stoppedWorking**

### 4.62.1 Detailed Description

## 4.63 ISceneOpen

Callback for when the scene that a MonoBehaviour is contained within is opened.

Inheritance diagram for ISceneOpen:

## Public Member Functions

- void **OnSceneOpen** ()

### 4.63.1 Detailed Description

Callback for when the scene that a MonoBehaviour is contained within is opened.

See also: ISceneOpenAsync.

## 4.64 ISceneOpenAsync

Inheritance diagram for ISceneOpenAsync:

## Public Member Functions

- IEnumerator **OnSceneOpen** ()

### 4.64.1 Detailed Description

Scene operation will wait for coroutine callback before continuing.

## 4.65 LerpUtility

Provides some convinience functions for lerping.

### Static Public Member Functions

- static IEnumerator **Lerp** (float start, float end, float duration, Action< float > callback, Action on↵ Complete=null)  
*Lerp from start to end over duration seconds.*
- static IEnumerator **Lerp** (Vector3 start, Vector3 end, float duration, Action< Vector3 > callback, Action on↵ Complete=null)
- static IEnumerator **Lerp** (Vector2 start, Vector2 end, float duration, Action< Vector2 > callback, Action on↵ Complete=null)

### 4.65.1 Detailed Description

Provides some convinience functions for lerping.

### 4.65.2 Member Function Documentation

#### 4.65.2.1 Lerp()

```
static IEnumerator Lerp (
    float start,
    float end,
    float duration,
    Action< float > callback,
    Action onComplete = null ) [static]
```

Lerp from *start* to *end* over *duration* seconds.

#### Parameters

<i>start</i>	The start value.
<i>end</i>	The end value.
<i>duration</i>	The duration in seconds to lerp for.
<i>callback</i>	The callback each lerp interval.
<i>onComplete</i>	Callback when complete.

## 4.66 LoadingScreen

A class that contains callbacks for loading screens.

Inheritance diagram for LoadingScreen:

### Public Member Functions

- override IEnumerator [OnOpen](#) ()  
*Called when loading scene is opened.*
- override IEnumerator [OnClose](#) ()  
*Called when loading scene is closed.*

### Public Member Functions inherited from [LoadingScreenBase](#)

- IEnumerator **OnOpen** ()  
*Called when the loading screen is opened.*
- IEnumerator **OnClose** ()  
*Called when the loading screen is about to close.*
- virtual void **OnProgressChanged** (float progress)  
*Called when progress has changed.*
- bool [HasPressedAnyKey](#) ()  
*Gets if any key has been pressed this frame.*
- WaitUntil **WaitForAnyKey** ()  
*Returns WaitUntil that waits for user to press any key.*

### Properties

- [SceneOperation](#) **operation** [get, set]  
*The current scene operation that this loading screen is associated with. May be null for the first few frames, before loading has actually begun.*

### Properties inherited from [LoadingScreenBase](#)

- bool **isOpening** [get]  
*Gets whatever we're currently opening.*
- bool [isOpen](#) [get]  
*Gets whatever we're currently open.*
- bool **isClosing** [get]  
*Gets whatever we're currently closing.*

## Additional Inherited Members

## Public Attributes inherited from [LoadingScreenBase](#)

- Action< [LoadingScreenBase](#) > **onDestroy**  
*Occurs when loading screen is destroyed.*
- Canvas [canvas](#)

### 4.66.1 Detailed Description

A class that contains callbacks for loading screens.

SplashScreen and LoadingScreen cannot co-exist within the same scene.

### 4.66.2 Member Function Documentation

#### 4.66.2.1 OnClose()

```
override IEnumerator OnClose ( ) [abstract]
```

Called when loading scene is closed.

Use this callback to hide your loading screen, the scene manager will wait until its done.

#### 4.66.2.2 OnOpen()

```
override IEnumerator OnOpen ( ) [abstract]
```

Called when loading scene is opened.

Use this callback to show your loading screen, the scene manager will wait until its done.

## 4.67 LoadingScreenBase

A generic base class for loading screens. You probably want to inherit from LoadingScreen though.

Inheritance diagram for LoadingScreenBase:

## Public Member Functions

- IEnumerator **OnOpen** ()  
*Called when the loading screen is opened.*
- IEnumerator **OnClose** ()  
*Called when the loading screen is about to close.*
- virtual void **OnProgressChanged** (float progress)  
*Called when progress has changed.*
- bool **HasPressedAnyKey** ()  
*Gets if any key has been pressed this frame.*
- WaitUntil **WaitForAnyKey** ()  
*Returns WaitUntil that waits for user to press any key.*

## Public Attributes

- Action< LoadingScreenBase > **onDestroy**  
*Occurs when loading screen is destroyed.*
- Canvas **canvas**

## Properties

- bool **isOpening** [get]  
*Gets whatever we're currently opening.*
- bool **isOpen** [get]  
*Gets whatever we're currently open.*
- bool **isClosing** [get]  
*Gets whatever we're currently closing.*

### 4.67.1 Detailed Description

A generic base class for loading screens. You probably want to inherit from LoadingScreen though.

When multiple loading screens exist within the same scene, only the first found one will be used.

### 4.67.2 Member Function Documentation

#### 4.67.2.1 HasPressedAnyKey()

```
bool HasPressedAnyKey ( )
```

Gets if any key has been pressed this frame.

Returns `false` if not isOpen.

### 4.67.3 Member Data Documentation

#### 4.67.3.1 canvas

Canvas canvas

The canvas that this loading screen uses.

This will automatically register canvas with CanvasSortOrderUtility, to automatically manage canvas sort order.

You probably want to set this through the inspector.

### 4.67.4 Property Documentation

#### 4.67.4.1 isOpen

bool isOpen [get]

Gets whatever we're currently open.

This is still `true` if `isClosing` is `true`.

## 4.68 LoadingScreenUtility

Manager for loading screens.

### Static Public Member Functions

- static bool **IsLoadingScreenOpen** (Scene scene)  
*Gets if this scene is a loading screen.*
- static **Async**< T > **OpenLoadingScreen**< T > (Scene loadingScene, **SceneOperation** operation=null, Action< T > callbackBeforeBegin=null, Action< float > progress=null)  
*Shows a loading screen.*
- static IEnumerator **CloseLoadingScreen** (Scene scene)
- static IEnumerator **CloseLoadingScreen** (**LoadingScreenBase** loadingScreen, Action< float > progress=null, bool closeScene=true)  
*Hide the loading screen.*
- static IEnumerator **CloseLoadingScreenScene** (Scene scene, Action< float > progress=null)  
*Close the scene that contained a loading screen.*
- static IEnumerator **CloseAll** ()  
*Hide all loading screens.*
- static **Async**< **LoadingScreen** > **FadeOut** (float duration=1, Color? color=null, Action< float > progress=null)  
*Fades out the screen.*
- static IEnumerator **FadeIn** (**LoadingScreenBase** loadingScreen, float duration=1, Color? color=null, Action< float > progress=null)  
*Fades in the screen.*
- static IEnumerator **DoAction** (Scene scene, Action action, Action< **LoadingScreenBase** > loadingScreen↔ Callback=null)
- static IEnumerator **DoAction** (Scene scene, Func< IEnumerator > coroutine, Action< **LoadingScreenBase** > loadingScreen↔ Callback=null)  
*Opens loading screen, performs action and hides loading screen again.*
- static IEnumerator **WithProgress** (this **AsyncOperation** asyncOperation, Action< float > onProgress)  
*Returns a coroutine that returns when AsyncOperation.isDone becomes true. onProgress will be called every frame with AsyncOperation.progress.*
- static **AsyncOperation** **Preload** (this **AsyncOperation** asyncOperation, out Func< IEnumerator > activate↔ Callback)  
*Sets AsyncOperation.allowSceneActivation to false.*

## Properties

- static bool **isAnyLoadingScreenOpen** [get]  
*Gets if any loading screens are open.*
- static Scene **fade** [get]  
*Finds the default fade loading screen. Can be set through project settings, or in scene loading section of the settings popup.*
- static Scene **defaultLoadingScreen** [get]  
*Gets the current default loading screen.*
- static IEnumerable< [LoadingScreenBase](#) > **loadingScreens** [get]  
*The currently open loading screens.*

### 4.68.1 Detailed Description

Manager for loading screens.

### 4.68.2 Member Function Documentation

#### 4.68.2.1 CloseLoadingScreen()

```
static IEnumerator CloseLoadingScreen (
    LoadingScreenBase loadingScreen,
    Action< float > progress = null,
    bool closeScene = true ) [static]
```

Hide the loading screen.

#### Parameters

<i>loadingScreen</i>	The loading screen to hide.
<i>progress</i>	The callback to receive progress.
<i>closeScene</i>	Specifies whatever the scene should be closed afterwards. Use <code>CloseLoadingScreenScene(Scene, Action&lt;float&gt;)</code> if <code>false</code> .

#### 4.68.2.2 DoAction()

```
static IEnumerator DoAction (
    Scene scene,
    Func< IEnumerator > coroutine,
    Action< LoadingScreenBase > loadingScreenCallback = null ) [static]
```

Opens loading screen, performs action and hides loading screen again.

#### Parameters

<i>scene</i>	The loading screen scene.
<i>coroutine</i>	To coroutine to execute.
<i>loadingScreenCallback</i>	The callback to perform when loading script is loaded, but before ASM has called <a href="#">LoadingScreenBase.OnOpen()</a> .

## 4.69 MainThreadUtility

### Static Public Member Functions

- static T **Invoke**< T > (Func< T > func)  
*Queues the function to be run on the main thread, during the next frame.*
- static void **Invoke** (Action action)  
*Queues the action to be run on the main thread, during the next frame.*
- static T **Invoke**< T > (this Func< T > func, bool mainThread=false)  
*Invokes the action .*
- static void **Invoke** (this Action action, bool mainThread=false)  
*Invokes the action .*
- static void **Start** ()  
*Starts main thread utility coroutine.*
- static void **Stop** ()  
*Stops main thread utility coroutine.*

### Properties

- static bool **isEnabled** [get]  
*Gets whatever MainThreadUtility is enabled, set to false in source code to disable.*
- static bool **isOnMainThread** [get]  
*Gets if the thread we're currently on is the main thread.*
- static bool **IsRunning** [get]  
*Gets if main thread utility is running.*

### 4.69.1 Detailed Description

An utility for running actions on the main thread.

Only usable in play mode.

### 4.69.2 Member Function Documentation

#### 4.69.2.1 Invoke() [1/2]

```
static void Invoke (
    Action action ) [static]
```

Queues the action to be run on the main thread, during the next frame.

#### Parameters

<i>action</i>	The action to invoke.
---------------	-----------------------

**4.69.2.2 Invoke()** [2/2]

```
static void Invoke (
    this Action action,
    bool mainThread = false ) [static]
```

Invokes the *action* .

**Parameters**

<i>action</i>	The action to invoke.
<i>mainThread</i>	Queues the action to be run on the main thread, during the next frame.

**4.69.2.3 Invoke< T >()** [1/2]

```
static T Invoke< T > (
    Func< T > func ) [static]
```

Queues the function to be run on the main thread, during the next frame.

**Parameters**

<i>func</i>	The action to invoke.
-------------	-----------------------

**4.69.2.4 Invoke< T >()** [2/2]

```
static T Invoke< T > (
    this Func< T > func,
    bool mainThread = false ) [static]
```

Invokes the *action* .

**Parameters**

<i>func</i>	The action to invoke.
<i>mainThread</i>	Queues the action to be run on the main thread, during the next frame.

**4.70 ObjectReference**

A reference to an object in a scene.

Inherits `IEqualityComparer< ObjectReference >`.

**Public Member Functions**

- [ObjectReference With](#) (Component component)

*Adds data about a component.*

- **ObjectReference With** (int? unityEventIndex=null, int? arrayIndex=null)

*Adds data about an unity event.*

- bool **IsValid** (bool returnTrueWhenSceneIsUnloaded=false)

*Returns true if the reference is still valid.*

### 4.70.1 Detailed Description

A reference to an object in a scene.

## 4.71 ParallelASMCallbacks

Specifies whatever the ASM callbacks should be run in parallel for any callbacks defined in this script.

Inherits Attribute.

### 4.71.1 Detailed Description

Specifies whatever the ASM callbacks should be run in parallel for any callbacks defined in this script.

## 4.72 Profile

A profile for ASM, contains settings and collections.

Inheritance diagram for Profile:

### Public Member Functions

- bool **IsStartupCollection** ([SceneCollection](#) collection)  
*Gets whatever the specified collection is a startup collection.*
- int **IndexOf** ([SceneCollection](#) collection)  
*Gets the index of the specified collection.*
- int **IndexOf** ([DynamicCollection](#) collection)  
*Gets the index of the specified collection.*
- bool **Contains** ([ISceneCollection](#) collection, bool checkRemoved=false)  
*Gets whatever this profile contains the specified collection.*
- IEnumerable< [ISceneCollection](#) > **FindCollections** ([Scene](#) scene)  
*Finds all collection that the scene is included in. Includes dynamic collections.*

## Public Member Functions inherited from [ASMMModel](#)

- virtual void [Save](#) ()  
*Saves the singleton to disk after a delay.*
- void [SaveNow](#) ()  
*Saves the singleton to disk.*
- void [SaveNow](#) (bool setDirty=true)  
*Saves the singleton to disk.*
- virtual bool **IsMatch** (string q)  
*Gets if q matches name.*

## Static Public Member Functions

- static [Profile](#) **Find** (string q)  
*Finds the profile with the specified name or id.*
- static bool **TryFind** (string q, out [Profile](#) profile)  
*Finds the profile with the specified name or id.*

## Static Public Member Functions inherited from [ASMMModel](#)

- static string **GenerateID** ()  
*Generate id.*

## Static Public Attributes

- static readonly string **AssetSearchString** = "t:" + typeof([Profile](#)).FullName  
*Gets 't:AdvancedSceneManager.Models.Profile', the string to use in AssetDatabase.FindAssets(string).*

## Properties

- static [Profile](#) **current** [get]  
*Gets the currently active profile.*
- IEnumerable< [Scene](#) > **scenes** [get]  
*Gets the scenes managed by this profile.*
- IEnumerable< [SceneCollection](#) > **collections** [get]  
*Gets the collections contained within this profile.*
- IEnumerable< [DynamicCollection](#) > **dynamicCollections** [get]  
*Gets the dynamic collections contained within this profile.*
- [StandaloneCollection](#) **standaloneScenes** [get]  
*Gets the standalone scenes contained within this profile.*
- IEnumerable< [Scene](#) > **startupScenes** [get]  
*Gets the scenes flagged to open on startup.*
- IEnumerable< [ISceneCollection](#) > **removedCollections** [get]  
*Gets all removed collections in this profile.*
- IEnumerable< [ISceneCollection](#) > **allCollections** [get]  
*Gets collections, standaloneScenes, dynamicCollections.*
- IEnumerable< [Scene](#) > **specialScenes** [get]  
*Gets default loading screen, splash screen and startup loading screen.*
- IEnumerable< [SceneCollection](#) > **startupCollections** [get]

*Gets the collections that will be opened on startup.*

- **Scene startupScene** [get, set]

*The startup scene.*

- **Scene loadingScene** [get, set]

*The default loading scene.*

- **Scene splashScene** [get, set]

*The splash scene.*

- ThreadPriority **backgroundLoadingPriority** [get, set]

*Application.backgroundLoadingPriority setting is not saved, and must be manually set every time build or editor starts, this property persists the value and automatically sets it during startup.*

- bool **enableChangingBackgroundLoadingPriority** [get, set]

*Enable or disable ASM automatically changing Application.backgroundLoadingPriority.*

- bool **unloadUnusedAssetsForStandalone** [get, set]

*Enable or disable ASM calling Resources.UnloadUnusedAssets after standalone scenes has been opened or closed.*

## Properties inherited from [ASMMModel](#)

- string **id** [get]

*Gets the id of this ASMMModel.*

- new string **name** [get, protected set]

## Additional Inherited Members

## Static Protected Member Functions inherited from [ASMMModel](#)

- static T **CreateInternal**< T > (string [name](#))

*Creates a profile. Throws if name is invalid.*

### 4.72.1 Detailed Description

A profile for ASM, contains settings and collections.

### 4.72.2 Property Documentation

#### 4.72.2.1 removedCollections

```
IEnumerable<ISceneCollection> removedCollections [get]
```

Gets all removed collections in this profile.

Removed collections still exist until deleted, and may be manually opened, but they will not be listed in collections or dynamicCollections.

#### 4.72.2.2 scenes

```
IEnumerable<Scene> scenes [get]
```

Gets the scenes managed by this profile.

Includes both collection and standalone scenes.

#### 4.72.2.3 specialScenes

```
IEnumerable<Scene> specialScenes [get]
```

Gets default loading screen, splash screen and startup loading screen.

`null` is filtered out.

#### 4.72.2.4 startupCollections

```
IEnumerable<SceneCollection> startupCollections [get]
```

Gets the collections that will be opened on startup.

If no collection is explicitly defined to be opened during startup, then the first available collection in list will be returned.

### 4.73 ProfileDependent< T >

Specifies a *T* that changes depending on active Profile.

Inherits ScriptableObject.

#### Classes

- class `Dict`  
*A dictionary of type Profile, T.*

#### Public Member Functions

- bool `GetModel` (out T scene)  
*Gets the selected scene.*
- T2 `DoAction< T2 >` (Func< T, T2 > action)  
*Performs an action on the scene.*
- void `DoAction` (Action< T > action)  
*Performs an action on the scene.*

#### Public Attributes

- `Dict list` = new `Dict`()  
*The list of proxies for this T.*

#### Properties

- bool `isValid` [get]  
*Gets if the current state of this T is valid.*

### 4.73.1 Detailed Description

Specifies a *T* that changes depending on active Profile.

#### Type Constraints

*T* : *ASMMModel*

### 4.73.2 Member Function Documentation

#### 4.73.2.1 DoAction()

```
void DoAction (
    Action< T > action )
```

Performs an action on the scene.

Does nothing if isValid is false.

#### 4.73.2.2 DoAction< T2 >()

```
T2 DoAction< T2 > (
    Func< T, T2 > action )
```

Performs an action on the scene.

Does nothing if isValid is false.

#### 4.73.2.3 GetModel()

```
bool GetModel (
    out T scene )
```

Gets the selected scene.

Returns null if scene something went wrong.

## 4.74 ProfileDependentCollection

Represents a SceneCollection that changes depending on active Profile.

Inheritance diagram for ProfileDependentCollection:

**Public Member Functions**

- [SceneOperation Open](#) (bool openAll=false)  
*Opens this collection.*
- [SceneOperation OpenAdditive](#) (bool openAll=false)  
*Opens this collection as additive.*
- [SceneOperation ToggleOpen](#) (bool openAll=false)  
*Toggles this collection open or closed.*
- [SceneOperation Close](#) ()  
*Closes this collection.*
- void **\_Open** (bool openAll=false)
- void **\_OpenAdditive** (bool openAll=false)
- void **\_ToggleOpen** ()
- void **\_ToggleOpen** (bool openAll)
- void **\_Close** ()

**Public Member Functions inherited from [ProfileDependent< SceneCollection >](#)**

- bool [GetModel](#) (out T scene)  
*Gets the selected scene.*
- T2 [DoAction< T2 >](#) (Func< T, T2 > action)  
*Performs an action on the scene.*
- void [DoAction](#) (Action< T > action)  
*Performs an action on the scene.*

**Additional Inherited Members****Public Attributes inherited from [ProfileDependent< SceneCollection >](#)**

- Dict **list**  
*The list of proxies for this T .*

**Properties inherited from [ProfileDependent< SceneCollection >](#)**

- bool **isValid** [get]  
*Gets if the current state of this T is valid.*

**4.74.1 Detailed Description**

Represents a SceneCollection that changes depending on active Profile.

**4.74.2 Member Function Documentation****4.74.2.1 Close()**

```
SceneOperation Close ( )
```

Closes this collection.

No effect if collection is already closed. Note that "additive collections" are not actually opened, only its scenes are.

Implements [SceneCollection.IMethods](#).

#### 4.74.2.2 Open()

```
SceneOperation Open (
    bool openAll = false )
```

Opens this collection.

##### Parameters

<i>openAll</i>	Specifies whatever scenes flagged to not open with collection, should.
----------------	--

Reopens all non-persistent scenes.

Implements [SceneCollection.IMethods](#).

#### 4.74.2.3 OpenAdditive()

```
SceneOperation OpenAdditive (
    bool openAll = false )
```

Opens this collection as additive.

##### Parameters

<i>openAll</i>	Specifies whatever scenes flagged to not open with collection, should.
----------------	--

Additive collections are not "opened", all scenes within are merely opened like normal scenes. Mostly intended for convenience.

Implements [SceneCollection.IMethods](#).

#### 4.74.2.4 ToggleOpen()

```
SceneOperation ToggleOpen (
    bool openAll = false )
```

Toggles this collection open or closed.

##### Parameters

<i>openState</i>	Specifies whatever you have a preferred state to toggle to, this means collection will not be closed if <code>true</code> is passed. This can be used to ensure collection is open, without having an explicit check beforehand. The inverse is also the case for <code>false</code> .
<i>openAll</i>	Specifies whatever scenes flagged to not open with collection, should.

Implements [SceneCollection.IMethods](#).

## 4.75 ProfileDependentScene

Represents a Scene that changes depending on active Profile.

Inheritance diagram for ProfileDependentScene:

### Public Member Functions

- [SceneOperation](#) **Open** ()  
*Opens the scene.*
- [SceneOperation](#) **OpenAndActivate** ()  
*Opens the scene and sets it as active.*
- [SceneOperation](#) **ToggleOpen** ()  
*Toggles this scene open or closed.*
- [SceneOperation](#) **Close** ()  
*Closes the scene.*
- [SceneOperation](#) **Preload** (Action onPreloaded=null)  
*Preloads the scene, to be displayed at a later time. See also: FinishPreload, DiscardPreload.*
- [SceneOperation](#) **FinishPreload** ()  
*Finishes preloading the scene, displaying it.*
- [SceneOperation](#) **DiscardPreload** ()  
*Discards the scene, if preloaded.*
- [SceneOperation](#) **OpenWithLoadingScreen** ([Scene](#) loadingScreen)  
*Opens the scene while a loading screen is open.*
- void **SetActive** ()  
*Sets the scene as active in heirarchy.*
- void **\_Open** ()  
*Event method. Its meant for UnityEngine.Events.UnityEvent.*
- void **\_OpenAndActivate** ()
- void **\_ToggleOpen** ()
- void **\_Close** ()
- void **\_Preload** ()
- void **\_FinishPreload** ()
- void **\_DiscardPreload** ()
- void **\_OpenWithLoadingScreen** ([Scene](#) loadingScene)
- void **\_SetActive** ()

### Public Member Functions inherited from [ProfileDependent< Scene >](#)

- bool [GetModel](#) (out T scene)  
*Gets the selected scene.*
- T2 [DoAction< T2 >](#) (Func< T, T2 > action)  
*Performs an action on the scene.*
- void [DoAction](#) (Action< T > action)  
*Performs an action on the scene.*

## Additional Inherited Members

### Public Attributes inherited from [ProfileDependent< Scene >](#)

- Dict **list**

*The list of proxies for this T .*

### Properties inherited from [ProfileDependent< Scene >](#)

- bool **isValid** [get]

*Gets if the current state of this T is valid.*

## 4.75.1 Detailed Description

Represents a Scene that changes depending on active Profile.

## 4.75.2 Member Function Documentation

### 4.75.2.1 Close()

[SceneOperation](#) Close ( )

Closes the scene.

No effect if scene is already closed.

Implements [Scene.IMethods](#).

### 4.75.2.2 FinishPreload()

[SceneOperation](#) FinishPreload ( )

Finishes preloading the scene, displaying it.

Scene must be preloaded beforehand.

Implements [Scene.IMethods](#).

### 4.75.2.3 Open()

[SceneOperation](#) Open ( )

Opens the scene.

No effect if scene is already open.

Implements [Scene.IMethods](#).

#### 4.75.2.4 Preload()

```
SceneOperation Preload (
    Action onPreloaded = null )
```

Preloads the scene, to be displayed at a later time. See also: FinishPreload, DiscardPreload.

Scene must be closed beforehand.

Implements [Scene.IMethods](#).

## 4.76 QueueUtility< T >

A utility that provides queuing.

### Static Public Member Functions

- static bool **IsQueued** (T queueable)  
*Get if the item is queued.*
- static bool **IsRunning** (T queueable)  
*Gets if the item is running.*
- static void **Stop** (T queueable)  
*Cancel the queueable.*
- static void **StopAll** ()  
*Cancel all queued and running items.*

### Properties

- static bool **isBusy** [get]  
*Gets whatever any items in the queue are running.*
- static IEnumerable< T > **queue** [get]  
*Gets the items currently in queue.*
- static IEnumerable< T > **running** [get]  
*Gets the items that are currently running.*

### Events

- static Action **queueEmpty**  
*Occurs when an queued item finishes and queue is empty.*
- static Action **queueFilled**  
*Occurs when an queued is added.*

### 4.76.1 Detailed Description

A utility that provides queuing.

#### Type Constraints

**T** : [IQueueable](#)

## 4.77 ResolvedCrossReference

Represents a resolved reference.

### Public Attributes

- [CrossSceneReference](#) *reference*  
*The unresolved reference.*
- [ObjectReference](#) *reference*  
*The unresolved and resolved reference to the variable.*
- [ResolveStatus](#) **result**  
*The result when setting value.*

### 4.77.1 Detailed Description

Represents a resolved reference.

### 4.77.2 Member Data Documentation

#### 4.77.2.1 **reference** [1/2]

[ObjectReference](#) *reference*

The unresolved reference.

The unresolved and resolved reference to the value.

#### 4.77.2.2 **reference** [2/2]

[ObjectReference](#) *reference*

The unresolved and resolved reference to the variable.

The unresolved and resolved reference to the value.

## 4.78 ResolvedReference

Represents a resolved ObjectReference.

### 4.78.1 Detailed Description

Represents a resolved ObjectReference.

## 4.79 Runtime

Manages runtime functionality for Advanced Scene Manager such as open scenes and collection.

Inheritance diagram for Runtime:

### Public Member Functions

- `IEnumerable< SceneLoader > GetToggleableSceneLoaders ()`  
*Gets a list of all added scene loaders that can be toggled scene by scene.*
- `SceneLoader GetLoaderForScene (Scene scene)`  
*Gets the loader for scene .*
- `void AddSceneLoader< T > ()`  
*Adds a scene loader.*
- `void RemoveSceneLoader< T > ()`  
*Removes a scene loader.*
- `SceneOperation Open (Scene scene)`
- `SceneOperation OpenAndActivate (Scene scene)`
- `SceneOperation Open (params Scene[] scenes)`
- `SceneOperation Open (IEnumerable< Scene > scenes)`  
*Opens the scenes.*
- `SceneOperation OpenWithLoadingScreen (Scene scene, Scene loadingScreen)`
- `SceneOperation OpenWithLoadingScreen (IEnumerable< Scene > scene, Scene loadingScreen)`  
*Opens a scene with a loading screen.*
- `SceneOperation Close (Scene scene)`
- `SceneOperation Close (params Scene[] scenes)`
- `SceneOperation Close (IEnumerable< Scene > scenes)`  
*Closes the scenes.*
- `SceneOperation Preload (Scene scene, Action onPreloaded=null)`
- `SceneOperation FinishPreload (Scene scene)`
- `SceneOperation FinishPreload ()`  
*Finishes the preload of the currently preloaded scene.*
- `SceneOperation DiscardPreload (Scene scene)`  
*Discards preload of the scene, if preloaded.*
- `SceneOperation DiscardPreload ()`  
*Discards the preload of the currently preloaded scene.*
- `SceneOperation ToggleOpen (Scene scene)`  
*Toggles the open state of this scene.*
- `void SetActive (Scene scene)`  
*Sets the scene as active.*
- `SceneOperation Open (SceneCollection collection, bool openAll=false)`
- `SceneOperation OpenAdditive (SceneCollection collection, bool openAll=false)`  
*Opens the collection without closing existing scenes.*

- **SceneOperation OpenAdditive** (IEnumerable< [SceneCollection](#) > collections, [SceneCollection](#) active↔ Collection=null, [Scene](#) loadingScene=null)  
*Opens the collection without closing existing scenes.*
- **SceneOperation Close** ([SceneCollection](#) collection)
- **SceneOperation ToggleOpen** ([SceneCollection](#) collection, bool openAll=false)
- **SceneState GetState** ([Scene](#) scene)  
*Gets the current state of the scene.*
- void **Track** ([Scene](#) scene, UnityEngine.SceneManagement.Scene unityScene)  
*Tracks the specified scene as open.*
- void **Track** ([Scene](#) scene)
- bool **Untrack** ([Scene](#) scene)  
*Untracks the specified scene as open.*
- void **UntrackScenes** ()  
*Untracks all open scenes.*
- void **Track** ([SceneCollection](#) collection, bool isAdditive=false)  
*Tracks the collection as open.*
- void **Untrack** ([SceneCollection](#) collection, bool isAdditive=false)  
*Untracks the collection.*
- void **UntrackCollections** ()  
*Untracks all collections.*
- bool **IsTracked** ([Scene](#) scene)  
*Gets whatever this scene is tracked as open.*
- bool **IsTracked** ([SceneCollection](#) collection)  
*Gets whatever this collection is tracked as open.*
- **SceneOperation CloseAll** (bool exceptLoadingScreens=true, bool exceptUnimported=true, params [Scene](#)[] except)  
*Closes all scenes and collections.*

## Public Attributes

- Action [onAllScenesClosed](#)  
*Occurs when the last user scene closes.*

## Properties

- IEnumerable< [Scene](#) > **openScenes** [get]  
*Gets the scenes that are open.*
- IEnumerable< [SceneCollection](#) > **openAdditiveCollections** [get]  
*Gets the collections that are opened as additive.*
- [SceneCollection](#) **openCollection** [get]  
*Gets the collection that is currently open.*
- [Scene](#) **preloadedScene** [get]  
*Gets the scene that is currently preloaded.*
- [Scene](#) **activeScene** [get]  
*Gets the active scene.*
- [Scene](#) **dontDestroyOnLoad** [get]  
*Gets the dontDestroyOnLoad scene.*
- bool **isBusy** [get]  
*Gets whatever ASM is busy with any scene operations.*
- IEnumerable< [SceneOperation](#) > **runningOperations** [get]  
*The currently running scene operations.*
- IEnumerable< [SceneOperation](#) > **queuedOperations** [get]  
*Gets the current scene operation queue.*
- [SceneOperation](#) **currentOperation** [get]  
*Gets the current active operation in the queue.*

## Properties inherited from [ISceneManager](#)

### Events

- Action< [Scene](#) > **sceneOpened**  
*Occurs when a scene is opened.*
- Action< [Scene](#) > **sceneClosed**  
*Occurs when a scene is closed.*
- Action< [SceneCollection](#) > **collectionOpened**  
*Occurs when a collection is opened.*
- Action< [SceneCollection](#) > **collectionClosed**  
*Occurs when a collection is closed.*
- Action< [Scene](#) > **scenePreloaded**  
*Occurs when a scene is preloaded.*
- Action< [Scene](#) > **scenePreloadFinished**  
*Occurs when a previously preloaded scene is opened.*
- Action **startedWorking**  
*Occurs when ASM has started working and is running scene operations.*
- Action **stoppedWorking**  
*Occurs when ASM has finished working and no scene operations are running.*

### Events inherited from [ISceneManager](#)

- Action< [SceneCollection](#) > **collectionClosed**
- Action< [SceneCollection](#) > **collectionOpened**
- Action< [Scene](#) > **sceneClosed**
- Action< [Scene](#) > **sceneOpened**
- Action< [Scene](#) > **scenePreloaded**
- Action< [Scene](#) > **scenePreloadFinished**
- Action **startedWorking**
- Action **stoppedWorking**

#### 4.79.1 Detailed Description

Manages runtime functionality for Advanced Scene Manager such as open scenes and collection.

#### 4.79.2 Member Function Documentation

##### 4.79.2.1 Close()

```
SceneOperation Close (
    IEnumerable< Scene > scenes )
```

Closes the scenes.

Closes persistent scenes.

Implements [ISceneManager](#).

#### 4.79.2.2 Open()

```
SceneOperation Open (
    IEnumerable< Scene > scenes )
```

Opens the scenes.

Open scenes will not be re-opened, please close it first.

Implements [ISceneManager](#).

#### 4.79.2.3 OpenAdditive() [1/2]

```
SceneOperation OpenAdditive (
    IEnumerable< SceneCollection > collections,
    SceneCollection activeCollection = null,
    Scene loadingScene = null )
```

Opens the collection without closing existing scenes.

No effect if no additive collections could be opened. Note that *activeCollection* will be removed from *collections* if it is contained within.

Implements [ISceneManager](#).

#### 4.79.2.4 OpenAdditive() [2/2]

```
SceneOperation OpenAdditive (
    SceneCollection collection,
    bool openAll = false )
```

Opens the collection without closing existing scenes.

##### Parameters

<i>collection</i>	The collection to open.
<i>openAll</i>	Specifies whatever all scenes should open, regardless of open flag.

Implements [ISceneManager](#).

#### 4.79.2.5 SetActive()

```
void SetActive (
    Scene scene )
```

Sets the scene as active.

No effect if not open.

Implements [ISceneManager](#).

**4.79.2.6 Track()** [1/2]

```
void Track (
    Scene scene,
    UnityEngine::SceneManagement::Scene unityScene )
```

Tracks the specified scene as open.

Does not open scene.

Implements [ISceneManager](#).

**4.79.2.7 Track()** [2/2]

```
void Track (
    SceneCollection collection,
    bool isAdditive = false )
```

Tracks the collection as open.

Does not open collection.

Implements [ISceneManager](#).

**4.79.2.8 Untrack()** [1/2]

```
bool Untrack (
    Scene scene )
```

Untracks the specified scene as open.

Does not close scene.

Implements [ISceneManager](#).

**4.79.2.9 Untrack()** [2/2]

```
void Untrack (
    SceneCollection collection,
    bool isAdditive = false )
```

Untracks the collection.

Does not close the collection.

Implements [ISceneManager](#).

#### 4.79.2.10 UntrackCollections()

```
void UntrackCollections ( )
```

Untracks all collections.

Does not close collections.

Implements [ISceneManager](#).

#### 4.79.2.11 UntrackScenes()

```
void UntrackScenes ( )
```

Untracks all open scenes.

Does not close scenes.

Implements [ISceneManager](#).

### 4.79.3 Member Data Documentation

#### 4.79.3.1 onAllScenesClosed

```
Action onAllScenesClosed
```

Occurs when the last user scene closes.

This usually happens by mistake, and likely means that no user code would run, this is your chance to restore to a known state (return to main menu, for example), or crash to desktop.

Returning to main menu can be done like this:

```
SceneManager.app.Restart()
```

### 4.79.4 Property Documentation

#### 4.79.4.1 activeScene

```
Scene activeScene [get]
```

Gets the active scene.

Returns `null` if the active scene is not imported.

Implements [ISceneManager](#).

#### 4.79.4.2 dontDestroyOnLoad

`Scene dontDestroyOnLoad [get]`

Gets the dontDestroyOnLoad scene.

Returns `null` outside of play mode.

Implements [ISceneManager](#).

## 4.80 Scene

Represents a scene.

Inheritance diagram for Scene:

### Classes

- interface [IMethods](#)
- interface [IMethods\\_Target](#)

### Public Member Functions

- `IEnumerable< GameObject > GetRootGameObjects ()`  
*Gets the root game objects in this Scene.*
- `T FindObject< T > ()`  
*Finds the object in the hierarchy of this Scene.*
- `bool FindObject< T > (out T component)`
- `IEnumerable< T > FindObjects< T > ()`  
*Finds the objects in the hierarchy of this Scene.*
- `SceneOperation Open ()`  
*Opens the scene.*
- `SceneOperation OpenAndActivate ()`  
*Opens the scene and sets it as active.*
- `SceneOperation ToggleOpen ()`  
*Toggles this scene open or closed.*
- `SceneOperation Close ()`  
*Closes the scene.*
- `SceneOperation Preload (Action onPreloaded=null)`  
*Preloads the scene, to be displayed at a later time. See also: [FinishPreload](#), [DiscardPreload](#).*
- `SceneOperation FinishPreload ()`  
*Finishes preloading the scene, displaying it.*
- `SceneOperation DiscardPreload ()`

- Discards the scene, if preloaded.*
- **SceneOperation OpenWithLoadingScreen** ([Scene](#) loadingScreen)
  - Opens the scene while a loading screen is open.*
- void **SetActive** ()
  - Sets the scene as active in heirarchy.*
- void **Activate** ()
- void **\_Open** ()
  - Event method. Its meant for UnityEngine.Events.UnityEvent.*
- void **\_OpenAndActivate** ()
- void **\_ToggleOpen** ()
- void **\_Close** ()
- void **\_Preload** ()
- void **\_FinishPreload** ()
- void **\_DiscardPreload** ()
- void **\_OpenWithLoadingScreen** ([Scene](#) loadingScene)
- void **\_SetActive** ()
- override bool **IsMatch** (string q)
  - Gets if q matches ASMMModel.name, id, path.*
- bool **EvalOpenAsPersistent** ([SceneCollection](#) parentCollection, [SceneCollection](#) collectionToOpen=null)
  - Gets whatever this scene will be opened as persistent.*
- void **SetSceneLoader**< [T](#) > ()
  - Specifies the scene loader to use for this scene.*
- Type **GetSceneLoader** ()
  - Gets the scene loader specified for this scene. null if none set.*
- [SceneLoader](#) **GetEffectiveSceneLoader** ()
  - Gets the effective, contextual, scene loader for this scene. null if none found (this means normal ASM loader will be used).*
- void **ClearSceneLoader** ()
  - Clears custom scene loader for this scene. This means normal ASM functionality will be used.*

## Public Member Functions inherited from [ASMMModel](#)

- virtual void [Save](#) ()
  - Saves the singleton to disk after a delay.*
- void [SaveNow](#) ()
  - Saves the singleton to disk.*
- void [SaveNow](#) (bool setDirty=true)
  - Saves the singleton to disk.*

## Static Public Member Functions

- static IEnumerable< [Scene](#) > **Find** (Func< [Scene](#), bool > predicate)
- static [Scene](#) **Find** (string q)
- static bool **TryFind** (string q, out [Scene](#) scene)
- static IEnumerable< [Scene](#) > **FindOpen** (string q)
- static IEnumerable< [Scene](#) > **FindOpen** (Func< [Scene](#), bool > predicate)

## Static Public Member Functions inherited from [ASMMModel](#)

- static string **GenerateID** ()
  - Generate id.*

## Static Public Attributes

- static readonly string **AssetSearchString** = "t:" + typeof(Scene).FullName  
*Gets 't:AdvancedSceneManager.Models.Scene', the string to use in AssetDatabase.FindAssets(string).*

## Properties

- bool **isImported** [get]  
*Gets whatever we are tracked by AssetRef.*
- bool **isIncluded** [get]  
*Gets whatever this scene is included in build.*
- bool **hasSceneAsset** [get]  
*Gets if m\_sceneAsset has a value.*
- string **path** [get, set]  
*Gets the path of the associated SceneAsset.*
- bool **isLoadingScreen** [get, set]  
*Gets if this scene is a loading screen.*
- bool **isSplashScreen** [get, set]  
*Gets if this scene is a splash screen.*
- bool **isSpecial** [get]  
*Gets if this is a 'special' scene.*
- bool **keepOpenWhenCollectionsClose** [get, set]  
*Specifies whatever this scene will remain open when collections close.*
- bool **keepOpenWhenNewCollectionWouldReopen** [get, set]  
*Specifies whatever this will remain open when a newly opened collection would have reopened it.*
- bool **isNonPersistent** [get]  
*Gets whatever this scene will close normally after a collection closes.*
- bool **openOnStartup** [get, set]  
*Specifies whatever this scene should be opened on startup.*
- bool **openOnPlayMode** [get, set]  
*Specifies whatever this scene should be opened when entering playmode.*
- **EditorPersistentOption autoOpenInEditor** [get, set]  
*Specifies whatever this scene should be opened automatically outside of play-mode.*
- List< **Scene** > **autoOpenInEditorScenes** [get]  
*Specifies the scenes that should trigger this scene to open when autoOpenInEditor is set to EditorPersistentOption.↔  
WhenAnyOfTheFollowingScenesAreOpened.*
- bool **isLocked** [get, set]  
*Gets if this scene is locked.*
- string **lockMessage** [get, set]  
*Gets the lock message for this scene.*
- IEnumerable< **CrossSceneReference** > **crossSceneReferences** [get, set]  
*Enumerates the cross-scene references defined on this scene.*
- bool **isActive** [get]  
*Gets if this scene is currently active.*
- bool **isOpenInHierarchy** [get]  
*Gets whatever the scene is open in the hierarchy, this is true if scene is currently loading, if scene is preloaded, if scene is fully open.*
- **SceneState state** [get]
- bool **isOpen** [get]  
*Gets whatever the scene is open.*
- bool **isPreloaded** [get]

*Gets whatever the scene is preloaded.*

- unityScene? [internalScene](#) [get, set]

*Gets the unityScene that this scene is associated with.*

- bool **isPersistent** [get]

*Gets if this scene is opened as persistent.*

- bool **isDefaultASMScene** [get]

*Gets if this is a default ASM scene. These are located in 'Packages/Advanced Scene Manager/Default scenes/'.*

- bool **isDontDestroyOnLoad** [get]

*Gets if this scene is the dontDestroyOnLoad scene.*

- bool **isDynamic** [get]

*Gets if this scene is dynamic, it is not persisted to disk.*

- string **sceneLoader** [get, set]

*Specifies what SceneManagement.SceneLoader to use.*

## Properties inherited from [ASMMModel](#)

- string **id** [get]

*Gets the id of this ASMMModel.*

- new string **name** [get, protected set]

## Additional Inherited Members

## Static Protected Member Functions inherited from [ASMMModel](#)

- static T **CreateInternal**< T > (string [name](#))

*Creates a profile. Throws if name is invalid.*

### 4.80.1 Detailed Description

Represents a scene.

### 4.80.2 Member Function Documentation

#### 4.80.2.1 Close()

```
SceneOperation Close ( )
```

Closes the scene.

No effect if scene is already closed.

Implements [Scene.IMethods](#).

#### 4.80.2.2 EvalOpenAsPersistent()

```
bool EvalOpenAsPersistent (
    SceneCollection parentCollection,
    SceneCollection collectionToOpen = null )
```

Gets whatever this scene will be opened as persistent.

## Parameters

<i>parentCollection</i>	Specifies the parent collection that was opened before <i>finalCollection</i> .
<i>collectionToOpen</i>	Specifies the collection that will be opened, if you are not evaluating state after it would have opened, pass <code>null</code> . If multiple collections are opened in sequence, then pass the final one.

**4.80.2.3 FindObject< T >()**

```
T FindObject< T > ( )
```

Finds the object in the hierarchy of this Scene.

Only works if scene is loaded.

## Type Constraints

***T* : *Component***

**4.80.2.4 FindObjects< T >()**

```
IEnumerable< T > FindObjects< T > ( )
```

Finds the objects in the hierarchy of this Scene.

Only works if scene is loaded.

## Type Constraints

***T* : *Component***

**4.80.2.5 FinishPreload()**

```
SceneOperation FinishPreload ( )
```

Finishes preloading the scene, displaying it.

Scene must be preloaded beforehand.

Implements [Scene.IMethods](#).

**4.80.2.6 GetRootGameObjects()**

```
IEnumerable< GameObject > GetRootGameObjects ( )
```

Gets the root game objects in this Scene.

Only usable if scene is open.

#### 4.80.2.7 Open()

`SceneOperation` Open ( )

Opens the scene.

No effect if scene is already open.

Implements [Scene.IMethods](#).

#### 4.80.2.8 Preload()

`SceneOperation` Preload (   
 `Action onPreloaded = null` )

Preloads the scene, to be displayed at a later time. See also: FinishPreload, DiscardPreload.

Scene must be closed beforehand.

Implements [Scene.IMethods](#).

#### 4.80.2.9 SetSceneLoader< T >()

`void` SetSceneLoader< T > ( )

Specifies the scene loader to use for this scene.

If the specified scene loader is not registered when scene is opened, then ASM will fallback to other scene loaders, if any (normal ASM functionality is used if not).

##### Type Constraints

***T*** : ***SceneLoader***

### 4.80.3 Property Documentation

#### 4.80.3.1 hasSceneAsset

`bool` hasSceneAsset [get]

Gets if `m_sceneAsset` has a value.

Only available in the editor.

#### 4.80.3.2 internalScene

`unityScene?` internalScene [get], [set]

Gets the `unityScene` that this scene is associated with.

`null` if scene is not open.

#### 4.80.3.3 isImported

```
bool isImported [get]
```

Gets whatever we are tracked by AssetRef.

Only available in editor.

#### 4.80.3.4 isLoadingScreen

```
bool isLoadingScreen [get], [set]
```

Gets if this scene is a loading screen.

Automatically updated.

If this is `false` for an actual loading screen, please make sure scene contains a `Callbacks.LoadingScreen` script.

Scene might sometimes have to be re-saved for this flag to appear.

#### 4.80.3.5 isSpecial

```
bool isSpecial [get]
```

Gets if this is a 'special' scene.

A scene is special if any of the following is `true`: `isSplashScreen`, `isLoadingScreen` or `isDontDestroyOnLoad`.

#### 4.80.3.6 isSplashScreen

```
bool isSplashScreen [get], [set]
```

Gets if this scene is a splash screen.

Automatically updated.

If this is `false` for an actual splash screen screen, please make sure scene contains a `Callbacks.SplashScreen` script.

Scene might sometimes have to be re-saved for this flag to appear.

#### 4.80.3.7 keepOpenWhenCollectionsClose

```
bool keepOpenWhenCollectionsClose [get], [set]
```

Specifies whatever this scene will remain open when collections close.

You'll have to close it manually, if needed.

#### 4.80.3.8 keepOpenWhenNewCollectionWouldReopen

```
bool keepOpenWhenNewCollectionWouldReopen [get], [set]
```

Specifies whatever this will remain open when a newly opened collection would have reopened it.

You'll have to close it manually, if needed.

#### 4.80.3.9 openOnPlayMode

```
bool openOnPlayMode [get], [set]
```

Specifies whatever this scene should be opened when entering playmode.

Only effective when scene added to Profile.standaloneScenes.

#### 4.80.3.10 openOnStartup

```
bool openOnStartup [get], [set]
```

Specifies whatever this scene should be opened on startup.

Only effective when scene added to Profile.standaloneScenes.

## 4.81 SceneCollection

Represents a collection of scenes.

Inheritance diagram for SceneCollection:

### Classes

- interface [IMethods](#)
- interface [IMethods\\_Target](#)

**Public Member Functions**

- override bool **IsMatch** (string q)  
*Gets if q matches ASMMModel.name.*
- [SceneOperation Open](#) (bool openAll=false)  
*Opens this collection.*
- [SceneOperation OpenAdditive](#) (bool openAll=false)  
*Opens this collection as additive.*
- [SceneOperation ToggleOpen](#) (bool openAll=false)  
*Toggles this collection open or closed.*
- [SceneOperation Close](#) ()  
*Closes this collection.*
- void **\_Open** (bool openAll=false)
- void **\_OpenAdditive** (bool openAll=false)
- void **\_ToggleOpen** ()
- void **\_ToggleOpen** (bool openAll=false)
- void **\_Close** ()
- bool **FindProfile** (out [Profile](#) profile)  
*Find the Profile that this collection is associated with.*
- [Profile](#) **FindProfile** ()  
*Find the Profile that this collection is associated with.*
- T **UserData**< T > ()  
*Casts and returns userData as the specified type. Returns null if invalid type.*
- bool **Contains** ([Scene](#) scene)  
*Gets if this collection contains scene .*
- bool **AutomaticallyOpenScene** ([Scene](#) scene, bool? value=null)  
*Gets or sets whatever the scene should automatically open, when this collection is open. Default is true.*

**Public Member Functions inherited from [ASMMModel](#)**

- virtual void [Save](#) ()  
*Saves the singleton to disk after a delay.*
- void [SaveNow](#) ()  
*Saves the singleton to disk.*
- void [SaveNow](#) (bool setDirty=true)  
*Saves the singleton to disk.*

**Static Public Member Functions**

- static [SceneCollection](#) **Find** (string q, bool activeProfile=true)  
*Finds a collection based on its title or id.*
- static bool **TryFind** (string q, out [SceneCollection](#) collection, bool activeProfile=true)  
*Finds a collection based on its title or id.*

**Static Public Member Functions inherited from [ASMMModel](#)**

- static string **GenerateID** ()  
*Generate id.*

## Static Public Attributes

- static readonly string **AssetSearchString** = "t:" + typeof([SceneCollection](#)).FullName  
Gets 't:[AdvancedSceneManager.Models.SceneCollection](#)', the string to use in `AssetDatabase.FindAssets(string)`.

## Properties

- int **count** [get]  
Gets the scene count of this collection.
- [Scene](#) **this[int index]** [get]  
Gets the scene at the specified index.
- string **title** [get]  
Gets the title of this collection.
- string **description** [get, set]  
Gets the description of this collection.
- IEnumerable< string > **scenePaths** [get]  
Gets the scenes of this collection.
- IEnumerable< [Scene](#) > **scenes** [get]  
Gets the scenes of this collection.
- IEnumerable< [Scene](#) > **allScenes** [get]  
Gets both scenes and loadingScreen.
- bool **hasScenes** [get]  
Gets if this collection has any scenes.
- bool **isStartupCollection** [get]  
Gets if this is a startup collection.
- ScriptableObject **userData** [get, set]  
The extra data that is associated with this collection.
- bool **isIncluded** [get, set]  
Gets whatever this collection should be included in build.
- [Scene](#) **loadingScreen** [get, set]  
The loading screen that is associated with this collection.
- [Scene](#) **effectiveLoadingScreen** [get]  
Gets effective loading screen depending on `loadingScreenUsage`.
- [LoadingScreenUsage](#) **loadingScreenUsage** [get, set]  
Specifies what loading screen to use.
- [Scene](#) **activeScene** [get, set]  
Specifies the scene that should be activated after collection is opened.
- [CollectionStartupOption](#) **startupOption** [get, set]  
Specifies startup option.
- [CollectionLoadingThreadPriority](#) **loadingPriority** [get, set]  
Specifies the thread priority to use when opening this collection.
- bool **openAsPersistent** [get, set]  
Specifies whatever this collection should be opened as persistent.
- bool **openAsDisabled** [get, set]  
Specifies whatever this collection should be opened as disabled.
- bool **unloadUnusedAssets** [get, set]  
Calls `Resources.UnloadUnusedAssets` after collection is opened or closed.
- List< [Scene](#) > **scenesThatShouldNotAutomaticallyOpen** [get]  
Specifies scenes that should not open automatically.
- [InputBinding](#) **binding** [get]

*Specifies bindings for this scene.*

- bool **isLocked** [get, set]  
*Gets if this collection is locked.*
- string **lockMessage** [get, set]  
*Gets the lock message for this collection.*
- bool **setActiveSceneWhenOpenedAsActive** [get, set]  
*Specifies whatever activeScene should be set, when collection is opened as additive.*
- bool **isOpen** [get]  
*Gets if this collection is open.*
- bool **isOpenAdditive** [get]  
*Gets if this collection is opened additively.*
- bool **isOpenNonAdditive** [get]  
*Gets if this collection is opened additively.*

### Properties inherited from [ASMMModel](#)

- string **id** [get]  
*Gets the id of this ASMMModel.*
- new string **name** [get, protected set]

### Properties inherited from [ISceneCollection](#)

- string **id** [get]  
*Gets the id of this collection.*

### Additional Inherited Members

### Static Protected Member Functions inherited from [ASMMModel](#)

- static T **CreateInternal**< T > (string [name](#))  
*Creates a profile. Throws if name is invalid.*

#### 4.81.1 Detailed Description

Represents a collection of scenes.

Only one collection can be open at a time.

#### 4.81.2 Member Function Documentation

##### 4.81.2.1 Close()

```
SceneOperation Close ( )
```

Closes this collection.

No effect if collection is already closed. Note that "additive collections" are not actually opened, only its scenes are.

Implements [SceneCollection.IMethods](#).

##### 4.81.2.2 Open()

```
SceneOperation Open (
    bool openAll = false )
```

Opens this collection.

**Parameters**

<i>openAll</i>	Specifies whatever scenes flagged to not open with collection, should.
----------------	--

Reopens all non-persistent scenes.

Implements [SceneCollection.IMethods](#).

**4.81.2.3 OpenAdditive()**

```
SceneOperation OpenAdditive (
    bool openAll = false )
```

Opens this collection as additive.

**Parameters**

<i>openAll</i>	Specifies whatever scenes flagged to not open with collection, should.
----------------	--

Additive collections are not "opened", all scenes within are merely opened like normal scenes. Mostly intended for convenience.

Implements [SceneCollection.IMethods](#).

**4.81.2.4 ToggleOpen()**

```
SceneOperation ToggleOpen (
    bool openAll = false )
```

Toggles this collection open or closed.

**Parameters**

<i>openState</i>	Specifies whatever you have a preferred state to toggle to, this means collection will not be closed if <code>true</code> is passed. This can be used to ensure collection is open, without having an explicit check beforehand. The inverse is also the case for <code>false</code> .
<i>openAll</i>	Specifies whatever scenes flagged to not open with collection, should.

Implements [SceneCollection.IMethods](#).

**4.81.3 Property Documentation****4.81.3.1 allScenes**

```
IEnumerable<Scene> allScenes [get]
```

Gets both scenes and loadingScreen.

`null` is filtered out.

### 4.81.3.2 isStartupCollection

```
bool isStartupCollection [get]
```

Gets if this is a startup collection.

Only available in editor.

### 4.81.3.3 userData

```
ScriptableObject userData [get], [set]
```

The extra data that is associated with this collection.

Use `UserData<T>` to cast it to the desired type.

## 4.82 SceneCollectionTemplate

Represents a template for a SceneCollection.

Inheritance diagram for SceneCollectionTemplate:

### Properties

- new string **name** [get]

### Properties inherited from [SceneCollection](#)

- int **count** [get]  
*Gets the scene count of this collection.*
- [Scene](#) **this[int index]** [get]  
*Gets the scene at the specified index.*
- string **title** [get]  
*Gets the title of this collection.*
- string **description** [get, set]  
*Gets the description of this collection.*
- IEnumerable< string > **scenePaths** [get]  
*Gets the scenes of this collection.*
- IEnumerable< [Scene](#) > **scenes** [get]  
*Gets the scenes of this collection.*
- IEnumerable< [Scene](#) > **allScenes** [get]  
*Gets both scenes and loadingScreen.*
- bool **hasScenes** [get]

- Gets if this collection has any scenes.*

  - bool **isStartupCollection** [get]

*Gets if this is a startup collection.*
- ScriptableObject **userData** [get, set]

*The extra data that is associated with this collection.*
- bool **isIncluded** [get, set]

*Gets whatever this collection should be included in build.*
- **Scene** **loadingScreen** [get, set]

*The loading screen that is associated with this collection.*
- **Scene** **effectiveLoadingScreen** [get]

*Gets effective loading screen depending on loadingScreenUsage.*
- **LoadingScreenUsage** **loadingScreenUsage** [get, set]

*Specifies what loading screen to use.*
- **Scene** **activeScene** [get, set]

*Specifies the scene that should be activated after collection is opened.*
- **CollectionStartupOption** **startupOption** [get, set]

*Specifies startup option.*
- **CollectionLoadingThreadPriority** **loadingPriority** [get, set]

*Specifies the thread priority to use when opening this collection.*
- bool **openAsPersistent** [get, set]

*Specifies whatever this collection should be opened as persistent.*
- bool **openAsDisabled** [get, set]

*Specifies whatever this collection should be opened as disabled.*
- bool **unloadUnusedAssets** [get, set]

*Calls Resources.UnloadUnusedAssets after collection is opened or closed.*
- List< **Scene** > **scenesThatShouldNotAutomaticallyOpen** [get]

*Specifies scenes that should not open automatically.*
- **InputBinding** **binding** [get]

*Specifies bindings for this scene.*
- bool **isLocked** [get, set]

*Gets if this collection is locked.*
- string **lockMessage** [get, set]

*Gets the lock message for this collection.*
- bool **setActiveSceneWhenOpenedAsActive** [get, set]

*Specifies whatever activeScene should be set, when collection is opened as additive.*
- bool **isOpen** [get]

*Gets if this collection is open.*
- bool **isOpenAdditive** [get]

*Gets if this collection is opened additively.*
- bool **isOpenNonAdditive** [get]

*Gets if this collection is opened additively.*

## Properties inherited from **ASMMModel**

- string **id** [get]

*Gets the id of this ASMMModel.*
- new string **name** [get, protected set]

## Properties inherited from [ISceneCollection](#)

- string **id** [get]  
*Gets the id of this collection.*

## Additional Inherited Members

## Public Member Functions inherited from [SceneCollection](#)

- override bool **IsMatch** (string q)  
*Gets if q matches ASMMModel.name.*
- [SceneOperation Open](#) (bool openAll=false)  
*Opens this collection.*
- [SceneOperation OpenAdditive](#) (bool openAll=false)  
*Opens this collection as additive.*
- [SceneOperation ToggleOpen](#) (bool openAll=false)  
*Toggles this collection open or closed.*
- [SceneOperation Close](#) ()  
*Closes this collection.*
- void **\_Open** (bool openAll=false)
- void **\_OpenAdditive** (bool openAll=false)
- void **\_ToggleOpen** ()
- void **\_ToggleOpen** (bool openAll=false)
- void **\_Close** ()
- bool **FindProfile** (out [Profile](#) profile)  
*Find the Profile that this collection is associated with.*
- [Profile FindProfile](#) ()  
*Find the Profile that this collection is associated with.*
- T **UserData**< T > ()  
*Casts and returns userData as the specified type. Returns null if invalid type.*
- bool **Contains** ([Scene](#) scene)  
*Gets if this collection contains scene .*
- bool **AutomaticallyOpenScene** ([Scene](#) scene, bool? value=null)  
*Gets or sets whatever the scene should automatically open, when this collection is open. Default is true.*

## Public Member Functions inherited from [ASMMModel](#)

- virtual void [Save](#) ()  
*Saves the singleton to disk after a delay.*
- void [SaveNow](#) ()  
*Saves the singleton to disk.*
- void [SaveNow](#) (bool setDirty=true)  
*Saves the singleton to disk.*

## Static Public Member Functions inherited from [SceneCollection](#)

- static [SceneCollection Find](#) (string q, bool activeProfile=true)  
*Finds a collection based on its title or id.*
- static bool **TryFind** (string q, out [SceneCollection](#) collection, bool activeProfile=true)  
*Finds a collection based on its title or id.*

## Static Public Member Functions inherited from [ASMMModel](#)

- static string **GenerateID** ()  
*Generate id.*

## Static Public Attributes inherited from [SceneCollection](#)

- static readonly string **AssetSearchString** = "t:" + typeof([SceneCollection](#)).FullName  
*Gets 't:AdvancedSceneManager.Models.SceneCollection', the string to use in AssetDatabase.FindAssets(string).*

## Static Protected Member Functions inherited from [ASMMModel](#)

- static T **CreateInternal**< T > (string [name](#))  
*Creates a profile. Throws if name is invalid.*

### 4.82.1 Detailed Description

Represents a template for a SceneCollection.

## 4.83 SceneLoadArgs

Specifies arguments for SceneLoader.LoadScene(Models.Scene, SceneLoadArgs).

Inheritance diagram for SceneLoadArgs:

### Public Member Functions

- void [SetCompleted](#) (UnityEngine.SceneManagement.Scene scene)  
*Notifies ASM that the load is done.*
- void [SetCompleted](#) (UnityEngine.SceneManagement.Scene scene, Func< IEnumerator > preloadCallback)
- void **SetCompletedWithoutScene** ()  
*Sets this loader as complete even though no scene was loaded.*
- bool **ChecksIncluded** (bool logError=true)  
*Checks if the scene is actually included in build.*
- UnityEngine.SceneManagement.Scene [GetOpenedScene](#) ()  
*Gets the UnityEngine.SceneManagement.Scene that was opened by this override.*

### Properties

- bool **isPreload** [get, set]  
*Specifies if the scene should be preloaded.*

## Properties inherited from [SceneLoaderArgsBase](#)

- bool **isLoadingScreen** [get]  
*Gets if this scene is a loading screen.*
- bool **isSplashScreen** [get]  
*Gets if this scene is a splash screen.*

### 4.83.1 Detailed Description

Specifies arguments for `SceneLoader.LoadScene(Models.Scene, SceneLoadArgs)`.

### 4.83.2 Member Function Documentation

#### 4.83.2.1 GetOpenedScene()

```
UnityEngine.SceneManagement.Scene GetOpenedScene ( )
```

Gets the `UnityEngine.SceneManagement.Scene` that was opened by this override.

Will return `default` if not found.

#### 4.83.2.2 SetCompleted() [1/2]

```
void SetCompleted (
    UnityEngine.SceneManagement.Scene scene )
```

Notifies ASM that the load is done.

##### Parameters

<i>scene</i>	The opened scene.
--------------	-------------------

#### 4.83.2.3 SetCompleted() [2/2]

```
void SetCompleted (
    UnityEngine.SceneManagement.Scene scene,
    Func< IEnumerator > preloadCallback )
```

##### Parameters

<i>scene</i>	The opened scene.
<i>preloadCallback</i>	Specifies a callback that will be called when it is time to activate preloaded scene.

## 4.84 SceneLoader

Specifies a scene loader.

Inherited by RuntimeSceneLoader.

### Public Member Functions

- virtual bool **CanOpen** ([Scene](#) scene)  
*Gets whatever this scene loader can open the scene.*
- IEnumerator **LoadScene** ([Scene](#) scene, [SceneLoadArgs](#) e)  
*Loads the scene specified in e.scene.*
- IEnumerator **UnloadScene** ([Scene](#) scene, [SceneUnloadArgs](#) e)  
*Unloads the scene specified in e.scene.*

### Static Public Member Functions

- static string **GetKey**< T > ()  
*Gets the key for the specified scene loader.*
- static string **GetKey**< T > (T obj)  
*Gets the key for the specified scene loader.*

### Properties

- string [Key](#) [get]  
*Gets the key for this scene loader.*
- virtual string **sceneToggleText** [get]  
*Specifies the text to display on the toggle in scene popup. Only has an effect if isGlobal is false.*
- virtual Indicator **indicator** [get]  
*Specifies the indicator on scene fields for this scene loader.*
- virtual bool [isGlobal](#) = true [get]  
*Specifies if this scene loader will can be applied to all scenes. Otherwise scenes will have to be explicitly flagged to open with this loader.*
- virtual bool **activeOutsideOfPlayMode** [get]  
*Specifies whatever this loader will run outside of play mode or not.*
- virtual bool **activeInPlayMode** = true [get]  
*Specifies whatever this loader will run in play mode or not.*
- bool **canBeActivated** [get]  
*Gets whatever this loader may be activated in the current context.*

#### 4.84.1 Detailed Description

Specifies a scene loader.

## 4.84.2 Property Documentation

### 4.84.2.1 isGlobal

```
virtual bool isGlobal = true [get]
```

Specifies if this scene loader will can be applied to all scenes. Otherwise scenes will have to be explicitly flagged to open with this loader.

To flag a scene to be opened with this loader, the following two methods can be used:

If sceneToggleText is non-empty, a toggle will be displayed in scene popup.

Programmatically Scene.SetSceneLoader<T> can be used.

### 4.84.2.2 Key

```
string Key [get]
```

Gets the key for this scene loader.

This is equal to System.Type.FullName.

## 4.85 SceneLoaderArgsBase

Base class for SceneLoadArgs and SceneUnloadArgs.

Inheritance diagram for SceneLoaderArgsBase:

### Properties

- bool **isLoadingScreen** [get]  
*Gets if this scene is a loading screen.*
- bool **isSplashScreen** [get]  
*Gets if this scene is a splash screen.*

### 4.85.1 Detailed Description

Base class for SceneLoadArgs and SceneUnloadArgs.

## 4.86 SceneManager

The central Advanced Scene Manager API. Provides access to the most important things in ASM.

### Static Public Member Functions

- static void [OnInitialized](#) (Action action)

*Call action when ASM has initialized.*

### Properties

- static [AssetsProxy](#) **assets** = new() [get]
- static IEnumerable< [Scene](#) > **openScenes** [get]
- static [SceneCollection](#) **openCollection** [get]
- static [Scene](#) **preloadedScene** [get]
- static [Runtime](#) **runtime** = new() [get]
- static [App](#) **app** = new [App](#)() [get]
- static [SettingsProxy](#) **settings** = new() [get]
- static [Profile](#) **profile** [get]
- static bool **isInitialized** [get]

*Gets whatever ASM is initialized. Calling ASM methods may fail if `false`, this is due to ASMSettings singleton not being loaded yet.*

### 4.86.1 Detailed Description

The central Advanced Scene Manager API. Provides access to the most important things in ASM.

### 4.86.2 Member Function Documentation

#### 4.86.2.1 OnInitialized()

```
static void OnInitialized (
    Action action ) [static]
```

Call *action* when ASM has initialized.

Will call immediately if already initialized.

### 4.86.3 Property Documentation

#### 4.86.3.1 isInitialized

```
bool isInitialized [static], [get]
```

Gets whatever ASM is initialized. Calling ASM methods may fail if `false`, this is due to ASMSettings singleton not being loaded yet.

See also [OnInitialized\(Action\)](#).

## 4.87 SceneOperation

A scene operation is a queueable operation that can open or close scenes. See also: SceneAction.

Inheritance diagram for SceneOperation:

### Public Member Functions

- **SceneOperation WithFriendlyText** (string text)  
*Specifies description for coroutine.*
- void **Cancel** ()  
*Cancel this operation.*
- **SceneOperation OpenAndActivate** (Scene scene)  
*Opens the scene, and makes sure it is activated afterwards.*
- **SceneOperation Focus** (Scene scene)  
*Sets focus to the specified scene. Overrides selected scene in collections.*
- **SceneOperation Activate** (Scene scene=null)  
*Sets focus to the specified scene. Overrides selected scene in collections. If null, then the first scene opened will be set as active.*
- **SceneOperation With** (SceneCollection collection, bool setActiveScene=false)  
*Specifies an associated collection.*
- **SceneOperation Open** (SceneCollection collection, bool openAll=false)
- **SceneOperation Close** (SceneCollection collection)
- **SceneOperation Open** (params Scene[] scenes)  
*Specifies the scenes to open.*
- **SceneOperation Close** (params Scene[] scenes)  
*Specifies the scenes to close.*
- **SceneOperation Callback** (params Callback[] callbacks)  
*Specifies user callbacks.*
- **SceneOperation Preload** (Scene scene)  
*Specifies a scene to preload.*
- **SceneOperation Open** (IEnumerable< Scene > scenes)
- **SceneOperation Close** (IEnumerable< Scene > scenes)
- **SceneOperation Callback** (IEnumerable< Callback > callbacks)
- **SceneOperation With** (Scene loadingScene, bool useLoadingScene=true)  
*Specifies loading screen to use.*
- **SceneOperation With** (Action< LoadingScreen > loadingScreenCallback)  
*Specifies a callback when loading screen is opened, before LoadingScreen.OnOpen is called.*
- **SceneOperation DisableLoadingScreen** (bool useLoadingScene=false)  
*Specifies whatever loading screen should be used.*
- **SceneOperation EnableLoadingScreen** (bool useLoadingScene=true)  
*Specifies whatever loading screen should be used.*
- **SceneOperation With** (ThreadPriority loadingPriority)  
*Specifies the ThreadPriority to use.*
- **SceneOperation UnloadUsedAssets** ()

*Specifies whatever Resources.UnloadUnusedAssets should be called at the end (before loading screen).*

- **SceneOperation With** (Progress< float > **customProgress**)

*Specifies custom progress that will be counted as part of progress.*

- void **CloseAll** (params **Scene[]** except)

*Closes all scenes prior to opening any scenes.*

- void **CloseAllNonPersistent** (params **Scene[]** except)

*Closes all non-persistent scenes prior to opening any scenes.*

- **SceneOperation ReportProgress** (Action< float > **progress**)

*Specifies a callback for when progress changes.*

## Static Public Member Functions

- static **SceneOperation Queue** ()

*Queues a new scene operation.*

- static **SceneOperation Start** ()

*Starts a new scene operation, ignoring queue.*

- static void **AddCallback** (**Callback** callback)

*Adds the callback to every scene operation.*

- static void **RemoveCallback** (**Callback** callback)

*Removes a callback that was added to every scene operation.*

## Properties

- static **SceneOperation done** = new **SceneOperation**() { hasRun = true } [get]

*Gets a SceneOperation that has already completed.*

- string **description** [get, protected set]

*Specifies description for coroutine.*

- **SceneCollection collection** [get]

*Specifies the collection that is being opened or closed.*

- bool **setActiveCollectionScene** [get]

*Specifies whatever active scene should be set when possible.*

- **Scene focus** [get]

*Sets focus to the specified scene. Overrides selected scene in collections.*

- bool **focusSingleScene** [get]

*Sets the first opened scene as active.*

- IEnumerable< **Scene** > **open** [get]

*Gets the scenes specified to open.*

- IEnumerable< **Scene** > **close** [get]

*Gets the scenes specified to close.*

- IEnumerable< **Callback** > **callbacks** [get]

*Gets the user defined callbacks.*

- **Scene preload** [get]

*Gets the scene specified to preload.*

- **Scene loadingScene** [get]

*Gets the specified loading screen.*

- Action< **LoadingScreen** > **loadingScreenCallback** [get]

*Gets the specified loading screen callback.*

- bool **useLoadingScene** [get]

*Gets whatever a loading screen should be used.*

- ThreadPriority? **loadingPriority** [get]

- Gets the specified ThreadPriority to be used.*
- bool? **unloadUnusedAssets** [get]
  - Gets whatever Resources.UnloadUnusedAssets should be called at the end (before loading screen).*
- IEnumerable< [Scene](#) > **closedScenes** [get]
  - Gets the scenes that was closed during this operation.*
- IEnumerable< [Scene](#) > **openedScenes** [get]
  - Gets the scenes that was opened during this operation.*
- bool **isLoadingScreen** [get, set]
  - Specifies whatever this scene operation was started by ASM to open a loading screen.*
- override bool [keepWaiting](#) [get]
  - Inherited from CustomYieldInstruction. Tells unity whatever the operation is done or not.*
- [Phase](#) **phase** [get]
  - The phase the this scene operation is currently in.*
- bool **wasCancelled** [get]
  - Gets if this scene operation is cancelled.*
- Progress< float > **customProgress** [get]
  - Gets custom progress, if there is any. Will be counted as part of progress.*
- [LoadingScreen](#) **openedLoadingScreen** [get]
  - Gets the loading screen that was opened by this operation.*
- float **progress** [get]
  - Gets the current progress.*

## Events

- static OnBeforeStart **beforeStart**
  - Occurs before operation has started working.*

## 4.87.1 Detailed Description

A scene operation is a queueable operation that can open or close scenes. See also: SceneAction.

## 4.87.2 Member Function Documentation

### 4.87.2.1 Activate()

```
SceneOperation Activate (
    Scene scene = null )
```

Sets focus to the specified scene. Overrides selected scene in collections. If `null`, then the first scene opened will be set as active.

No effect if preloading.

### 4.87.2.2 Cancel()

```
void Cancel ( )
```

Cancel this operation.

Note that the operation might not be cancelled immediately, if user defined callbacks are currently running.

#### 4.87.2.3 Close()

```
SceneOperation Close (
    params Scene[] scenes )
```

Specifies the scenes to close.

Can be called multiple times to add more scenes.

#### 4.87.2.4 Focus()

```
SceneOperation Focus (
    Scene scene )
```

Sets focus to the specified scene. Overrides selected scene in collections.

No effect if preloading.

#### 4.87.2.5 Open()

```
SceneOperation Open (
    params Scene[] scenes )
```

Specifies the scenes to open.

Can be called multiple times to add more scenes.

#### 4.87.2.6 Preload()

```
SceneOperation Preload (
    Scene scene )
```

Specifies a scene to preload.

A scene specified to preload cannot also be added to open or close lists.

#### 4.87.2.7 ReportProgress()

```
SceneOperation ReportProgress (
    Action< float > progress )
```

Specifies a callback for when progress changes.

Only one callback can be registered, previous one will be replaced by *progress* .

#### 4.87.2.8 With()

```
SceneOperation With (
    Scene loadingScene,
    bool useLoadingScene = true )
```

Specifies loading screen to use.

Has no effect if useLoadingScene is false.

### 4.87.3 Property Documentation

#### 4.87.3.1 close

```
IEnumerable<Scene> close [get]
```

Gets the scenes specified to close.

List will change depending on when its called (i.e. only open scenes can be closed).

#### 4.87.3.2 focus

```
Scene focus [get]
```

Sets focus to the specified scene. Overrides selected scene in collections.

No effect if preloading.

#### 4.87.3.3 keepWaiting

```
override bool keepWaiting [get]
```

Inherited from CustomYieldInstruction. Tells unity whatever the operation is done or not.

Inherited from CustomYieldInstruction. Tells unity whatever the operation is done or not.

#### 4.87.3.4 open

```
IEnumerable<Scene> open [get]
```

Gets the scenes specified to open.

List will change depending on when its called (i.e. only closed scenes can be opened).

## 4.88 SceneUnloadArgs

Specifies arguments for `SceneLoader.UnloadScene(Models.Scene, SceneUnloadArgs)`.

Inheritance diagram for `SceneUnloadArgs`:

### Public Member Functions

- void **SetCompleted** ()  
*Notifies ASM that the unload is done.*

### Additional Inherited Members

### Properties inherited from [SceneLoaderArgsBase](#)

- bool **isLoadingScreen** [get]  
*Gets if this scene is a loading screen.*
- bool **isSplashScreen** [get]  
*Gets if this scene is a splash screen.*

### 4.88.1 Detailed Description

Specifies arguments for `SceneLoader.UnloadScene(Models.Scene, SceneUnloadArgs)`.

## 4.89 SceneUtility

An utility class to perform actions on scenes.

### Static Public Member Functions

- static IEnumerable< scene > **GetAllOpenUnityScenes** ()  
*Get all open unity scenes.*
- static bool **IsIncluded** (Scene scene)  
*Gets if the scene is included in build.*
- static void **Move** (this GameObject obj, Scene scene)
- static void **Move** (this GameObject obj, scene scene)
- static GameObject **MoveHere** (this MonoBehaviour mono, GameObject obj)  
*Moves obj to this scene.*
- static GameObject **CreateHere** (this MonoBehaviour mono)  
*Creates a game object in this scene.*
- static GameObject **CreateHere** (this MonoBehaviour mono, string name)  
*Creates a game object in this scene.*
- static GameObject **CreateHere** (this MonoBehaviour mono, string name, params Type[] components)  
*Creates a game object in this scene.*
- static TComponent **CreateHere**< TComponent > (this MonoBehaviour mono, string gameObjectName)  
*Creates a game object in this scene. Adds and returns component TComponent .*
- static Scene **CreateDynamic** (string name, UnityEngine.SceneManagement.LocalPhysicsMode localPhysicsMode=UnityEngine.SceneManagement.LocalPhysicsMode.None)  
*Creates a scene at runtime, that is not saved to disk.*
- static bool **FindCollection** (this Scene scene, out SceneCollection collection)
- static SceneCollection **FindCollection** (this Scene scene)  
*Attempts to find best match for collection.*
- static IEnumerable< SceneCollection > **FindCollections** (this Scene scene, bool allProfiles=false)  
*Finds which collections that this scene is a part of.*
- static IEnumerable< SceneCollection > **FindCollections** (this Scene scene, Profile profile)  
*Finds which collections that this scene is a part of.*
- static IEnumerable< Scene > **FindOpen** (string q)  
*Find open scenes by name or path.*
- static Scene **Find** (string q)  
*Find scenes by name or path.*
- static IEnumerable< Scene > **FindOpen** (Func< Scene, bool > predicate)  
*Find open scenes by predicate.*
- static IEnumerable< Scene > **Find** (Func< Scene, bool > predicate)  
*Find scenes by predicate.*
- static bool **ASMScene** (this Component component, out Scene scene)
- static Scene **ASMScene** (this GameObject gameObject, out Scene scene)
- static Scene **ASMScene** (this Component component)
- static Scene **ASMScene** (this GameObject gameObject)
- static bool **ASMScene** (this scene thisScene, out Scene scene)
- static Scene **ASMScene** (this scene scene)  
*Gets the associated ASM Scene.*
- static IEnumerable< Scene > **EvaluateFinalSceneList** (Profile profile, App.StartupProps props)  
*Evaluate the final scene list after startup.*
- static IEnumerable< Scene > **EvaluateFinalSceneList** (IEnumerable< SceneCollection > collections)  
*Evaluate the final scene list after opening a sequence of collections.*
- static void **SetEnabled** (this Scene scene, bool isEnabled)  
*Sets all root objects as enabled / disabled.*
- static void **Enable** (this Scene scene)  
*Sets all root objects as enabled.*
- static void **Disable** (this Scene scene)  
*Sets all root objects as disabled.*

## Properties

- static bool **isStartupScene** [get]  
*Gets if current, and only, scene is the startup scene.*
- static scene **dontDestroyOnLoadScene** [get]  
*Gets the dontDestroyOnLoad scene. Returns null if not open.*
- static bool **hasAnyScenes** [get]  
*Gets if there are any scenes open that are not dynamically created, and not yet saved to disk.*
- static int **unitySceneCount** [get]

### 4.89.1 Detailed Description

An utility class to perform actions on scenes.

### 4.89.2 Member Function Documentation

#### 4.89.2.1 CreateDynamic()

```
static Scene CreateDynamic (
    string name,
    UnityEngine::SceneManagement::LocalPhysicsMode localPhysicsMode = UnityEngine::SceneManagement::LocalPhysicsMode::None ) [static]
```

Creates a scene at runtime, that is not saved to disk.

Returns null if scene could not be created.

#### 4.89.2.2 Disable()

```
static void Disable (
    this Scene scene ) [static]
```

Sets all root objects as disabled.

Only has an effect if scene is open.

#### 4.89.2.3 Enable()

```
static void Enable (
    this Scene scene ) [static]
```

Sets all root objects as enabled.

Only has an effect if scene is open.

#### 4.89.2.4 EvaluateFinalSceneList() [1/2]

```
static IEnumerable< Scene > EvaluateFinalSceneList (
    IEnumerable< SceneCollection > collections ) [static]
```

Evaluate the final scene list after opening a sequence of collections.

## Parameters

<i>collections</i>	The sequence of collections that would be opened.
--------------------	---

**4.89.2.5 EvaluateFinalSceneList()** [2/2]

```
static IEnumerable< Scene > EvaluateFinalSceneList (
    Profile profile,
    App::StartupProps props ) [static]
```

Evaluate the final scene list after startup.

## Parameters

<i>profile</i>	The profile that would be used to run startup process with.
<i>props</i>	The startup props that would be used to run process with.

**4.89.2.6 FindCollection()**

```
static SceneCollection FindCollection (
    this Scene scene ) [static]
```

Attempts to find best match for collection.

Only checks current profile.

**4.89.2.7 SetEnabled()**

```
static void SetEnabled (
    this Scene scene,
    bool isEnabled ) [static]
```

Sets all root objects as enabled / disabled.

Only has an effect if scene is open.

## 4.90 ScriptableObjectUtility

Contains utility methods for ScriptableObject.

**Static Public Member Functions**

- static void **Save** (this ScriptableObject obj)  
*Saves the ScriptableObject.*

### 4.90.1 Detailed Description

Contains utility methods for ScriptableObject.

### 4.90.2 Member Function Documentation

#### 4.90.2.1 Save()

```
static void Save (
    this ScriptableObject obj ) [static]
```

Saves the ScriptableObject.

Safe to call from outside editor, but has no effect.

## 4.91 SerializableDictionary< TKey, TValue >

A serializable dictionary.

Inherits Dictionary< TKey, TValue >, and ISerializationCallbackReceiver.

### 4.91.1 Detailed Description

A serializable dictionary.

Older unity versions might need a wrapper class, since they won't support serializing generic types. Don't forget SerializableAttribute on wrapper!

## 4.92 SerializableStringBoolDict

A serializable dictionary of string and bool.

Inheritance diagram for SerializableStringBoolDict:

### 4.92.1 Detailed Description

A serializable dictionary of string and bool.

## 4.93 SettingsProxy

Provides access to ASM settings.

### Properties

- **ASMSettings project** [get]  
*The project-wide ASM settings.*
- **Profile profile** [get]  
*The current ASM profile.*

### 4.93.1 Detailed Description

Provides access to ASM settings.

### 4.93.2 Property Documentation

#### 4.93.2.1 profile

**Profile** profile [get]

The current ASM profile.

Could be `null`.

## 4.94 SpamCheck

Provides an easy way to check for spamming.

### Public Member Functions

- **bool IsSpam ()**  
*Gets if an action was executed not long enough ago.*
- **void MarkAsExecuted ()**  
*Marks this spam check as executed, disallowing any actions until cooldown has run out.*
- **void Execute (Action action)**  
*Runs action if allowed.*

### Properties

- static **SpamCheck Global** = new **SpamCheck()** [get]  
*Gets the global spam check.*
- **bool isEnabled** [get, set]  
*Gets or sets if this SpamCheck is enabled.*
- **float executeCooldown** [get, set]  
*Gets or sets the cooldown.*
- **float lastExecute** [get]  
*Gets the time an action was executed last.*
- **float timeSinceLastExecute** [get]  
*Gets the time an action was executed last.*

### 4.94.1 Detailed Description

Provides an easy way to check for spamming.

### 4.94.2 Property Documentation

#### 4.94.2.1 Global

```
SpamCheck Global = new SpamCheck() [static], [get]
```

Gets the global spam check.

Don't worry about conflicts with ASM stuff, we use a separate one.

#### 4.94.2.2 isEnabled

```
bool isEnabled [get], [set]
```

Gets or sets if this SpamCheck is enabled.

When disabled actions will run without checking whatever it is a spam call.

## 4.95 SplashScreen

A class that contains callbacks for splash screens.

Inheritance diagram for SplashScreen:

### Public Member Functions

- override IEnumerator [OnOpen](#) ()  
*Called when splash scene is opened.*
- override IEnumerator [OnClose](#) ()  
*Called when splash scene is about to close.*

## Public Member Functions inherited from [LoadingScreenBase](#)

- IEnumerator **OnOpen** ()  
*Called when the loading screen is opened.*
- IEnumerator **OnClose** ()  
*Called when the loading screen is about to close.*
- virtual void **OnProgressChanged** (float progress)  
*Called when progress has changed.*
- bool **HasPressedAnyKey** ()  
*Gets if any key has been pressed this frame.*
- WaitUntil **WaitForAnyKey** ()  
*Returns WaitUntil that waits for user to press any key.*

## Additional Inherited Members

## Public Attributes inherited from [LoadingScreenBase](#)

- Action< [LoadingScreenBase](#) > **onDestroy**  
*Occurs when loading screen is destroyed.*
- Canvas **canvas**

## Properties inherited from [LoadingScreenBase](#)

- bool **isOpening** [get]  
*Gets whatever we're currently opening.*
- bool **isOpen** [get]  
*Gets whatever we're currently open.*
- bool **isClosing** [get]  
*Gets whatever we're currently closing.*

### 4.95.1 Detailed Description

A class that contains callbacks for splash screens.

SplashScreen and LoadingScreen cannot coexist within the same scene.

### 4.95.2 Member Function Documentation

#### 4.95.2.1 OnClose()

```
override IEnumerator OnClose ( ) [abstract]
```

Called when splash scene is about to close.

Use this callback to hide your splash screen, the scene manager will wait until its done.

#### 4.95.2.2 OnOpen()

```
override IEnumerator OnOpen ( ) [abstract]
```

Called when splash scene is opened.

Use this callback to show your splash screen, the scene manager will wait until its done.

## 4.96 StandaloneCollection

Represents a collection of standalone scenes. These scenes are guaranteed to be included in build (if the associated Profile is active).

Inherits ISceneCollection.IEditable.

### Properties

- string **id** [get]  
*Gets the id of this collection.*
- IEnumerable< [Scene](#) > **scenes** [get]  
*Gets the scenes of this collection.*
- IEnumerable< string > **scenePaths** [get]  
*Gets the scenes of this collection.*
- string **title** [get]  
*Gets the title of this collection.*
- string **description** [get]  
*Gets the description of this collection.*
- IEnumerable< [Scene](#) > **startupScenes** [get]  
*Gets all scenes that will be opened on startup.*
- int **count** [get]  
*Gets the scene count of this collection.*
- [Scene](#) **this[int index]** [get]  
*Gets the scene at the specified index.*

#### 4.96.1 Detailed Description

Represents a collection of standalone scenes. These scenes are guaranteed to be included in build (if the associated Profile is active).

Usage: Profile.standaloneScenes.

## 4.97 App.StartupProps

An object that persists start properties across domain reload, which is needed when configurable enter play mode is set to reload domain on enter play mode.

## Public Member Functions

- **StartupProps** ([StartupProps](#) props)  
*Creates a new props, from the specified props, copying its values.*

## Public Attributes

- bool **forceOpenAllScenesOnCollection**  
*Specifies whatever all scenes on openCollection should be opened.*
- Color? [fadeColor](#)  
*The color for the fade out.*
- [SceneCollection](#) **openCollection**  
*Specifies a collection to be opened after startup process is done.*

## Properties

- bool **runStartupProcessWhenPlayingCollection** [get, set]  
*Specifies whatever startup process should run before openCollection is opened.*
- bool **runStartupProcess** [get]  
*Gets if startup process should run.*
- Color **effectiveFadeColor** [get]  
*Gets the effective fade animation color, uses fadeColor if specified. Otherwise PlayerSettings.SplashScreen.backgroundColor will be used during first startup. On subsequent restarts Color.black will be used (ASM restart, not application restart!).*

### 4.97.1 Detailed Description

An object that persists start properties across domain reload, which is needed when configurable enter play mode is set to reload domain on enter play mode.

### 4.97.2 Member Data Documentation

#### 4.97.2.1 fadeColor

Color? fadeColor

The color for the fade out.

Unity splash screen color will be used if null.

## 4.98 UIFadeExtensions

Provides extension methods for CanvasGroup.

### Static Public Member Functions

- static IEnumerator **Fade** (this CanvasGroup group, float to, float duration, bool setBlocksRaycasts=true)  
*Animates the alpha of a CanvasGroup.*
- static IEnumerator **Fade** (this Graphic text, float to, float duration, bool ignoreTimeScale)  
*Animates the alpha of a Graphic.*
- static IEnumerator **Fade** (this RectTransform element, float to, float duration, bool ignoreTimeScale)  
*Animates the alpha of all Graphic found on element and children.*
- static IEnumerator **Fade** (this UIBehaviour element, float to, float duration, bool ignoreTimeScale)  
*Animates the alpha of all Graphic found on element and children.*

#### 4.98.1 Detailed Description

Provides extension methods for CanvasGroup.

### 4.99 UnityCompatibilityHelper

Contains helpers for dealing with multiple versions of unity.

### Static Public Member Functions

- static T **FindFirstObjectByType**< T > ()

#### 4.99.1 Detailed Description

Contains helpers for dealing with multiple versions of unity.
